

## Subject card

Subject name and code	Signal Processing, PG_00047780						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		53.0	100
Subject objectives	Student uses basic analog and discrete-time signal processing algorithms and tools. Student analyzes signals and systems in the time and frequency domains. Student designs elementary discrete-time systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can:n- apply analytical, simulation and experimental methods,n- notice their systemic and non-technical aspects,n- make a preliminary economic assessment of suggested solutions and engineering workn						
	[K7_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices						
Subject contents	1. Classification of signals. 2. Representation of continuous-time signals in the frequency domain. Continuous Fourier transformation. 3. Properties of continuous Fourier transformation. Analogue signal spectrum. 4. Discrete-time Fourier transformation (DTFT). 5. Properties of the DTFT. Discrete-time signal spectrum. 6. Processing of a discrete-time signal by a linear system. 7. Discrete-time complex signal - instantaneous amplitude, phase and angular frequency. 8. Hilbert transformation of a discrete-time signal. Applications. 9. Complex envelope of a discrete-time band-pass signal. 10. Analog to digital conversion 11. Digital to analog conversion. 12. Quantization noise and its additive model. 13. Estimating the signal to quantization noise power ratio. 14. Difference equations for discrete-time linear systems having finite (FIR) and infinite (IIR) impulse responses. 15. Block schemes of discrete-time systems. 16. The Z transformation. 17. Transfer function of a discrete-time system. 18. Discrete-time systems of finite impulse response. 19. Discrete-time systems of infinite impulse response. 20. Realizability of discrete-time systems in real time versus causality. 21. Stability. Minimum-phase discrete-time systems. 22. Introduction to digital FIR and IIR filtering. 23. Examples of designing elementary digital filters. 24. Discrete Fourier transformation (DFT). 25. Fast Fourier transformation (FFT). Applications. 26. Relationships between: DTFT, DFT and Z transformations. 27. Discrete linear convolution. 28. Circular convolution. Applications. 29. Introduction to interpolation and decimation. 30. Applications of interpolation and decimation.						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	50.0%	50.0%
	Written exam	50.0%	50.0%
Recommended reading	Basic literature	A.V. Oppenheim, R.W. Schafer with J. R. Buck: Discrete-Time Signal Processing. Prentice Hall International, 1999.	
	Supplementary literature	S.W.Smith: The scientist and engineer's guide to digital signal processing, California Technical Pub,1997	
	eResources addresses		
Example issues/ example questions/ tasks being completed	<p>Practically used operator of averaging over two neighboring samples is given in the form of its impulse response. Find and write down the formula for its difference equation and its frequency responses: complex response, amplitude response, phase response and group delay response. Draw these characteristics as functions of variable <math>\omega</math>. Also draw the structure of this operator as a filter. Is this FIR or IIR filter? How do you recognize that?</p> <p>Using DFT and IDFT find and write down the output of digital FIR filter of given impulse response on given input signal. Draw the spectra of signals at input and output of the filter in cartesian form and the transfer function of the filter based on estimated DFT-s, while the spectra and transfer function are the complex sequences of 4-point length. On the examination sheet each student will find matrix formulas needed for evaluation of 4-point DFT and IDFT.</p>		
Work placement	Not applicable
