

Subject card

Subject name and code	Waste-water Technology , PG_00059189						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Environmental Engineering Technology -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Krzysztof Czerwionka					
	Teachers	mgr inż. Emilia Bączkowska dr hab. inż. Krzysztof Czerwionka					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	16.0	0.0	16.0	0.0	0.0	32
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	32	6.0		62.0	100	
Subject objectives	Presentation of the basic scope of knowledge regarding the issues of quantity and quality of municipal wastewater and knowledge regarding the unit processes used for their treatment						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W03] has a structured and theoretically founded knowledge in the field of chemistry and biology, including knowledge necessary to understand the technological processes related to water treatment, wastewater treatment, waste management and sludge management	The student is able to use knowledge of chemistry and biology to assess the effectiveness of processes used for wastewater treatment.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	[K6_U01] has the ability to self-education, can obtain information from literature, databases and other sources, uses information technology, Internet resources; can integrate the obtained information, make their interpretation, as well as draw conclusions and formulate and justify opinions	The student understands the need to update knowledge in the field of wastewater characteristics and its impact on the selection of unit processes for pollutant removal	[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject
	[K6_U10] can design basic equipment for water treatment, wastewater treatment and sludge and waste management	The student is able to present the technological sequence of wastewater treatment	[SU3] Assessment of ability to use knowledge gained from the subject
	[K6_U09] is able to use well-chosen methods and measuring devices that enable determination of basic parameters of the water treatment process and wastewater treatment; can perform simple laboratory tests leading to the assessment of water quality, pollutant load in sewage	The student is able to perform laboratory tests to determine the parameters of wastewater treatment processes	[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
Subject contents	<p>Lecture: Basic concepts and definitions. Indicators and criteria for assessing wastewater quality. Pollutant loads. Discharge of wastewater into the environment: wastewater receivers, legal conditions. Technological processes of mechanical wastewater treatment. Basics of biological wastewater treatment: microbiological composition, development of bacterial culture. Biological unit processes: hydrolysis, oxidation, ammonification, nitrification, denitrification, biological dephosphatation. Technological parameters of the activated sludge method. Basic technological systems of biological wastewater treatment. Natural methods of wastewater treatment: biological ponds, soil-plant treatment plants, domestic treatment plants. Modern methods of nitrogen removal: partial nitrification/denitrification, anammox, deammonification.</p> <p>Laboratory exercises: Examination of COD fractions of wastewater. Chemical removal of phosphorus from wastewater. Treatment of wastewater contaminated with oil emulsions. Studies of the speed of unit processes of nitrogen and phosphorus removal. Studies of the efficiency of nitrogen removal in the deammonification process.</p>		
Prerequisites and co-requisites	Knowledge of the following subjects: environmental chemistry and basics of eco-engineering		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Passing the laboratory	60.0%	40.0%
	Final exam	60.0%	60.0%
