GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	, PG_00059190		
Field of study	Environmental Engineering		
Date of commencement of studies	October 2022	Academic year of realisation of subject	2024/2025
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Part-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Faculty of Civil and Environmental Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Arkadiusz Ostojski	
	Teachers	dr inż. Arkadiusz Ostojski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	25.0	0.0	0.0	0.0	0.0	25

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	25	0.0	50.0	75

Subject objectives

The aim of the course is to provide knowledge about the current requirements for thermal protection of buildings, heating systems, and hot water preparation.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W09] has ordered, theoretically founded knowledge in the field of water supply, sewage, heating, ventilation and air conditioning, and the principles of shaping the microclimate of rooms; knows legal regulations, standardization issues and recommendations for the design of water supply, sewage, heating and gas networks and installations	Distinguishes between the types of heating systems and domestic hot water preparation. He knows the current legal requirements for thermal protection of buildings and heating installations.	[SW1] Assessment of factual knowledge
[K6_W08] has elementary knowledge of construction: including building materials, their strength, construction mechanics and building physics, moisture migration in buildings, heat transfer through building partitions	The student must demonstrate basic knowledge of building physics. He knows the mechanism of heat transfer through building partitions and the current legal requirements for thermal protection of buildings.	[SW1] Assessment of factual knowledge

Subject contents

Lecture: Basics of heat transfer (conduction, convection, radiation). Thermal conductivity of building materials. Calculation values of thermal conductivity. Heat transfer resistances. Thermal resistance of homogeneous and heterogeneous partitions. Air layer resistance. Thermal resistance of ventilated and unventilated air layers. Heat transfer coefficient. Calculation of the heat transfer coefficient of building partitions. Temperature distribution in the partition. Thermal bridges in the partitions. Heat losses to the ground. Air temperature design values. Heat losses through building partitions. Air infiltration. Heat losses on heating the ventilation air. Total design heat loss of the rooms and the design load on the entire building. Energy certificates for buildings. Types of low-temperature heating systems (gravity - pump, with a lower - upper separation, one - two - pipe, floor). Applied protection of open and closed heating installations. Regulation of heating systems. Ways of preparing domestic hot water.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Written exam	60.0%	100.0%
