

Subject card

Subject name and code	Information Security Management, PG_00016968						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2022/2023	
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	2	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Paweł Kowalski				
	Teachers		dr inż. Paweł Kowalski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	15.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Acquainting students with principles of information security management and information security solutions in industrial control systems and computer networks. IT (information technology) / OT (operational technology) convergence.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_W07		The student has knowledge of information security management systems.		[SW1] Assessment of factual knowledge		
	K7_K05		The student works in a group, can think and act in an entrepreneurial way.		[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills		
	K7_U09		The student is able to make a preliminary economic analysis of the planned tasks in the field of automation and robotics		[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information		
	K7_W09		The student is able to test the IT system in terms of security.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	K7_U08		The student has the necessary preparation to work in an industrial environment, conduct research, and apply the principles of occupational health and safety.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>LECTURE</p> <p>Basic aspects of information security: identification, authenticity and authorization, confidentiality, integrity and accessibility. Hazards: users, attacks, malicious software, informatics wars. Types and methods of safety violation of computer systems. Methods and measures of information security. Methods and systems of the access control. Fire walls. Systems of intruders finding. Spam phenomenon and countermeasures. Virtual private networks: architectures and protocols. Cryptographic methods and algorithms. Basic principles of information security management.</p> <p>Identification of hazards, and analysis and assessment of risks. Basic strategies of information security management. A system of information security in company and institution. Requirements concerning the information security and protections with regard to standards: PN-ISO/ISO 17799, ISO/IEC TR 13335 and PN-ISO/IEC 27001. Standard ISO/IEC 15408 and meaning of common criteria (CC). Life cycle and information security management. Basics of the protection system design with regard to technical and organizational aspects. Examples of solutions. The role of the board of directors. Audit of the information security management system. Methods and tools for the safety and security assessment. The quality and reliability management of software.</p> <p>Safety and security of wired and wireless networks. Safety of some protocols, hazards and countermeasures. Data coding mechanisms and authenticity. Electronic signature. Standards used in wireless networks and security mechanisms. Integrated functional safety and information security management in programmable industrial control and protection systems. Safety and security of distributed industrial computer networks with regard to the standard IEC 62443.</p>														
Prerequisites and co-requisites	<p>Knowledge concerning applications of the computer systems and networks, and programmable technologies in the industry. Basic knowledge about the identification of hazards, the reliability and safety analysis as well as the analysis and assessment of risks of technical plants and systems, including the critical infrastructure. Basic knowledge in the domain of cryptography.</p>														
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="448 875 794 909">Subject passing criteria</th> <th data-bbox="794 875 1141 909">Passing threshold</th> <th data-bbox="1141 875 1487 909">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 909 794 943">Technical paper</td> <td data-bbox="794 909 1141 943">50.0%</td> <td data-bbox="1141 909 1487 943">30.0%</td> </tr> <tr> <td data-bbox="448 943 794 976">Test</td> <td data-bbox="794 943 1141 976">50.0%</td> <td data-bbox="1141 943 1487 976">40.0%</td> </tr> <tr> <td data-bbox="448 976 794 1014">Presentation</td> <td data-bbox="794 976 1141 1014">50.0%</td> <td data-bbox="1141 976 1487 1014">30.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Technical paper	50.0%	30.0%	Test	50.0%	40.0%	Presentation	50.0%	30.0%
