

Subject card

Subject name and code	Experimental methods in physics, PG_00059251						
Field of study	Civil Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject	2022/2023				
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study				
Mode of study	Full-time studies	Mode of delivery	at the university				
Year of study	1	Language of instruction	Polish				
Semester of study	2	ECTS credits	1.0				
Learning profile	general academic profile	Assessment form	assessment				
Conducting unit	Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Bogumiła Strzelecka					
	Teachers	dr hab. inż. Agnieszka Witkowska Piotr Okoczuk dr inż. Bartosz Trawiński Hanna Świątek dr inż. Marcin Łapiński dr inż. Natalia Wójcik dr inż. Anna Rybicka dr inż. Bogumiła Strzelecka Karolina Milewska dr inż. Kamil Kolincio dr hab. inż. Jakub Karczewski Michał Maciejewski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
	Metody doświadczalne z fizyki - Moodle ID: 28740 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=28740						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	15	2.0	8.0	25		
Subject objectives	Students realize five laboratory experiments:1. Measurement of the center of gravity2. Young's modulus measurement3. Measurement of the modulus of elasticity4. Measurement of the coefficient of linear expansion5. Resistance measurement using a Wheatstone bridgeStudents are to perform measurements, process the results and discuss the obtained results.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U01] Apply knowledge and understanding of mathematics as well as sciences and engineering disciplines underlying civil engineering to solve engineering problems and issues.	The student will learn to use measuring equipment, learn about the linear regression method, learn to estimate measurement uncertainties.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_W01] Demonstrate knowledge and understanding of mathematics as well as sciences and engineering disciplines underlying civil engineering at a level necessary to achieve the other programme outcomes.	Students gets with the measuring apparatus, independently realizes measurements, discusses the results of measurements.	[SW3] Assessment of knowledge contained in written work and projects
Subject contents	Measurement of Young's modulus, measurement of the spring constant, measurement of the linear expansion coefficient, measurement of the center of mass of a system of bodies and measurement of the resistance of individual resistances		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	taking measurements and reports	50.0%	100.0%
Recommended reading	Basic literature	Exercise instructions: https://ftims.pg.edu.pl/wydzial/laboratoria-wydzialowe/laboratorium-z-fizyki-czesc-1	
	Supplementary literature	Fundamentals of Physics D. Halliday, R Resnick, J. Walker	
	eResources addresses		
Example issues/ example questions/ tasks being completed	Graph linearization Linear regression method Correct record of the final result		
Work placement	Not applicable
