

Subject card

Subject name and code	Advanced measuring systems, PG_00059489						
Field of study	Management and Production Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Technologii Maszyn i Automatyzacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Dobrzyński				
	Teachers		dr inż. Michał Dobrzyński dr inż. Aleksandra Laska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Familiarisation with advanced measurement methods based on CMM confocal microscopy with interferometric and other methods.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W03] has an orderly, theoretically founded knowledge related to selected areas of production engineering.	The student has an extended knowledge of advanced measurement systems. The student has an extended knowledge of geometric surface structure parameters and their interpretation.	[SW1] Assessment of factual knowledge
	[K7_U04] is able to plan and carry out experiments, including measurements and computer simulations, interpret the obtained results and extract conclusions; can use analytical, simulation and experimental methods to formulate and solve engineering tasks	The student selects a measurement system for specific metrology tasks. The student analyses measurement results and determines the uncertainty range.	[SU2] Assessment of ability to analyse information
	[K7_U09] is able to define the directions of further learning and implement the process of self-education	The student acquires knowledge from the literature on measurement and its accuracy. The student verifies the methods of measurement depending on the properties of the object being measured and the expected uncertainty of measurement.	[SU4] Assessment of ability to use methods and tools
	[K7_K04] is aware of the social role of the university graduate, and especially understands the need to formulate and communicate to society - incl. through the mass media - information and opinions on technological achievements and other aspects of an engineer's activity; makes efforts to provide such information and opinions in a generally comprehensible manner, justifying different points of view	The student communicates using specialist vocabulary. The student explains the meaning of specialised terms and their metrological interpretation.	[SK4] Assessment of communication skills, including language correctness
Subject contents	Lecture Introduction, Essentials of coordinate measuring, Basic principles of CMMs and their parameters, Measuring systems, Measuring heads and how to determine their accuracy, Non-contact measuring heads, Measuring procedures and standard computer software, Production measuring machines, Accuracy of measuring machines and how to determine them, Coordinate measuring arms, Industrial computed tomography, Confocal microscopy, Interferometric microscopy. Laboratory Exercises: Measurement of different geometrical features by coordinate measuring technology, planning of measurements by techniques determining the geometrical structure of surfaces by confocal and interferometric techniques.		
Prerequisites and co-requisites	Basic metrology course		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory report	60.0%	40.0%
	Final test	60.0%	60.0%
Recommended reading	Basic literature	1. E. Ratajczyk , A Woźniak, Współrzędnościowe systemy pomiarowe, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2016. 2. W. Jakubiec, J. Malinowski: Metrologia wielkości geometrycznych, WNT, Warszawa 2018. 3. S. Białas, Z. Humienny, K. Kiszka: Metrologia z podstawami specyfikacji geometrii wyrobów (GPS), Oficyna wydawnicza PW, Warszawa 2014.	
	Supplementary literature	Scientific journal articles: Measurement, Metrology and Measurement System, Measurement and Control, and others
