

Subject card

Subject name and code	Efficiency and quality of machining processes, PG_00059500						
Field of study	Management and Production Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Zakład Technologii Maszyn i Automatykacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Kazimierz Orłowski					
	Teachers	prof. dr hab. inż. Kazimierz Orłowski dr hab. inż. Daniel Chuchała dr inż. Aleksandra Suchta					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	6.0		34.0	100	
Subject objectives	The aim of the course is to get acquainted with issues of process modeling and operation of cutting tools in manufacturing processes. Learn about the construction and application of various tool systems and their influence on the quality and efficiency of processes. Methods and means of selection and analysis of the implementation of processes on machine tools.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U04] is able to plan and carry out experiments, including measurements and computer simulations, interpret the obtained results and extract conclusions; can use analytical, simulation and experimental methods to formulate and solve engineering tasks	The student is able to analyse the results of tests carried out during the preparation and/or execution of treatment processes.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
	[K7_K02] is aware of the importance and understanding of non-technical aspects and effects of engineering activities, including its impact on the environment, and the related responsibility for decisions made demonstrates knowledge of actions to reduce risk and anticipate the social impact of engineering and manufacturing activities	The student is able to identify environmental risks and select appropriate process conditions to reduce them.	[SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work
	[K7_W03] has an orderly, theoretically founded knowledge related to selected areas of production engineering.	The student is able to select the appropriate machining process to achieve the expected product quality.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K7_U03] can use information and communication techniques appropriate for acquiring and processing information and performing tasks typical for engineering activities	The student is able to obtain information on the parameters of machining processes using web and mobile tools.	[SU4] Assessment of ability to use methods and tools	
Subject contents	<p>LECTURE: General characteristics and classification of materials for cutting edges of tools with defined cutting edge. Causes of wear, geometrical factors of wear, physical and technological bluntness factors of an ablate. Wear in time (tool life, wear of cutting tool blades in interrupted machining). Principles of blade material selection. Tool loading - energy properties of machining process. Cutting forces - methods of force estimation based on model taking into account specific cutting resistance and elements of modern fracture mechanics (Atkins's model). Models for determining shear angle in cutting zone. Tooling system overview (ISO, HSK, CAPTO, etc.). Principles of tool and insert selection. Methods of measuring cutting edge wear. Vibrations in cutting process. Dynamic stiffness of tools with low inherent stiffness. Economic efficiency and optimization of machining process.</p> <p>LABORATORY: Geometry of cutting edge. Construction of modern cutting tools. Study of influence of cutting edge geometry on surface roughness in turning. Wear and tear of cutting edges. Computer aided selection of cutting tools. Static stiffness. Determination of critical speeds of tools with low inherent stiffness. Tool cost analysis.</p> <p>PROJECT:</p> <p>Prediction of energy conditions for a selected machining process</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory exercises	100.0%	10.0%
	Project exercises	100.0%	10.0%
	Final test	56.0%	80.0%
