

Subject card

Subject name and code	Models in spatial development, PG_00053456						
Field of study	Spatial Development						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Robert Skrzypczyński				
	Teachers		dr inż. Robert Skrzypczyński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	To acquaint students with various types of models used in spatial management, methods of their creation and application.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U04		Student chooses a quantitative model, appropriate to the conditions and tasks related to spatial management		[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	K7_U02		Student indicates the place and method of applying models in the process of urban planning and regional planning.		[SU3] Assessment of ability to use knowledge gained from the subject		
Subject contents	<div>1. The concept and types of models and their role.</div> <div>2. Iconographic and descriptive (ideological, conceptual) models concerning cities historical and contemporary.</div> <div>3. Models in urban, region and country planning - creation and application.</div> <div>4. Models of tourism development.</div> <div>5. Systemic views of cities and other social territorial systems.</div> <div>6. Population models.</div> <div>7. Partial and comprehensive quantitative models (mathematical and simulation models of cities): model classifications, Lowry model, models: gravity, flow, Land-Use Transportation Interactions (LUTI), cellular automata, Agent-Based Models, microsimulation models. The paradigm of Zipser spatial decisions, ORION.</div> <div>8. Models of regional growth.</div> <div>9. Spatial processes, selected theories of spatial management - model approaches.</div> <div>10. City control models.</div> <div>11. Application of models in scenarios.</div>						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Activity during lectures - tests (quizzes)		50.0%		10.0%		
	Colloquium (test)		50.0%		90.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Types of models from the point of view of: the way of expressing reality / the goals of their construction 2. In which phases of the planning process the models can be used? 3. What can models refer to in designing the spatial structure of the city? 4. What submodels does the LUTI Model contain? 5. What can simulation models be used for? 	
Work placement	Not applicable
