

Subject card

Subject name and code	Eco-design of cities and regions, PG_00053623						
Field of study	Spatial Development						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	2		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Miłosz Marciniak				
	Teachers		dr Miłosz Marciniak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	45.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		55.0	125
Subject objectives	The aim of the course is to familiarize the student with the spectrum of analytical methods and design solutions used in the ecological design of the coastal zone used in the regional and city perspective. These methods include the assessment of the climatic sensitivity of the analyzed structures and ways of increasing their resilience through appropriate spatial management solutions.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K81] is able to cooperate in international team at her/his own university, during work placement and during study abroad	Student potrafi pozyskać aktualną wiedzę o podejściu proekologicznym w projektowaniu miast i regionów strefy nadmorskiej.	[SK4] Assessment of communication skills, including language correctness [SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
	K7_W01	Student knows the essence and complexity of the processes related to the ecological design of cities and regions of the coastal zone, with particular emphasis on the effects of climate change	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	K7_W06	Student knows and understands the concepts and principles of copyright protection and the need to manage intellectual property resources - in particular in the field of photographic resources, expert studies, databases and spatial information systems.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	K7_U05	Student is able to interpret the system of connections on a regional and local scale - primarily natural and functional relations.	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task
	K7_U08	Student is able to agree with the group the correct division of tasks, support each other substantively and inspire in finding the best pro-ecological solutions at various scales. By conducting a seminar, he can involve the group in a discussion.	[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment
Subject contents	<p>Identification and assessment of the ecological problems of the region affecting the cities and other settlement structures of the coastal zone. Identification and assessment of ecological problems of cities and other settlement structures of the coastal zone. General principles of sustainable design of cities and other settlement structures in the coastal zone. Links between pro-ecological activities on a regional scale with the coastal zone. Identification of pro-ecological activities on a regional scale, affecting cities and settlements in the coastal zone. Ecological space and strategies of urban development. Ecological design as an instrument of environmental protection. Assessment of sensitivity and adaptation potentials of various types of spatial structures of the coastal zone.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Presentation of the thematic presentation	100.0%	100.0%
