GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Data engineering tools, PG_00045768		
Field of study	Technical Physics		
Date of commencement of studies	February 2023	Academic year of realisation of subject	2023/2024
Education level	second-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Instytut Fizyki i Informatyki Stosowanej -> Faculty of Applied Physics and Mathematics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Paweł Syty	
	Teachers	dr inż. Patryk Jasik dr inż. Paweł Syty	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	45	5.0	25.0	75

Subject objectives	To familiarize students with selected IT systems for data processing and analysis.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U02] Has enhanced knowledge of programming languages and can use software packages.	The student is able to use selected IT systems together with the accompanying programming languages to analyze information and process it.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information
	[K7_W04] Has enhanced knowledge of mathematical, numerical and simulation methods applied in the description and modelling of physical phenomena.	The student has in-depth knowledge of data processing methods in selected information systems and is able to create a mathematical model of a selected fragment of reality using selected methods of data engineering and machine learning.	[SW1] Assessment of factual knowledge

Subject contents	Review of available data engineering tools. Advantages and disadvantages of selected tools. Introduction to machine learning on the example of selected software. Apache Hadoop as a tool for distributed storage and processing of large data sets using computer clusters. Use cases using Apache Spark and Apache Hive. Examples of using the SAS environment in data engineering: SAS Data Integration Studio, SAS Enterprise Miner. Exemplary possibilities of using H2O software in Big Data. Introduction to advanced business analytics on the example of Power BI.

Prerequisites and co-requisites	Knowledge of data mining methods. Knowledge of Python and R programming languages.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	50.0%	100.0%

Recommended reading	Basic literature	Trevor Hastie, Robert Tibshirani, Jerome Friedman, „The Elements of Statistical Learning: Data Mining, Inference, and Prediction", Springer 2008. Alan Agresti, "An Introduction to Categorical Data Analysis", Wiley - Interscience 2007.
	Supplementary literature	"SAS Visual Analytics 7.4: User's Guide", SAS Institute Inc. 2015

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	Analyze the selected data set using SAS Enterprise Miner.	
Work placement	Not applicable
