

## Subject card

Subject name and code	Corrosion in marine industry, PG_00035460						
Field of study	Corrosion						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Electrochemistry, Corrosion and Materials Engineering -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Stefan Krakowiak				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		3.0		17.0	50
Subject objectives	The aim of the subject is to familiarize students with the characteristics of degradation processes occurring in the marine environment. Information on corrosion processes taking place in seawater and atmosphere characteristic for the coastal area will be presented. The methods of corrosion protection most often implemented in the conditions of exploitation of the structure in the marine environment will also be discussed. Standards applied in the process of securing marine installations will also be presented, with particular emphasis on application technology of paint coatings.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U04		The student is able to apply simple measurement methods to determine the corrosive risk and factors that cause them.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	K7_W02		Student is able to recognize characteristic corrosion attacks and can identify methods for minimizing their effects.		[SW1] Assessment of factual knowledge		
	K7_W03		The student is able to use the acquired knowledge to select the most effective way to protect the marine structure from corrosion.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	K7_U01		The student is able to use databases to solve problems with corrosion and to propose the most effective methods to counteract damage.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<p>Lectures:</p> <p>1. Characteristics of the corrosion process in the conditions of sea and saline waters;</p> <p>2. An overview of legal regulations regarding the protection of marine constructions with particular emphasis on the requirements of NORSOK M-501 and the IMO SOLAS convention;</p> <p>3. Methods of protection against corrosion in marine conditions;</p> <p>4. Designing of corrosion monitoring systems:</p> <p>5. Discussion of selected corrosion cases in the maritime economy.</p> <p>Laboratory works:</p> <p>1. Corrosion of metallic connections</p> <p>2. The effect of oxygenation on the corrosion rate of construction materials.</p> <p>3. Research on the interaction of cathodic protection and organic coatings.</p> <p>4. Assessment of the suitability of galvanic anodes used in the maritime industry.</p> <p>5. Corrosion of construction materials in the marine environment.</p>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table><tr><td>Subject passing criteria</td><td>Passing threshold</td><td>Percentage of the final grade</td></tr><tr><td>passing the lecture</td><td>60.0%</td><td>50.0%</td></tr><tr><td>passing the laboratory</td><td>60.0%</td><td>50.0%</td></tr></table>	Subject passing criteria	Passing threshold	Percentage of the final grade	passing the lecture	60.0%	50.0%	passing the laboratory	60.0%	50.0%
