Subject objectives	The aim of the course is to acquaint students with the history, present state and future prospects of nanotechnology - an interdisciplinary field combining achievements in physics, chemistry, biology, material science, and many others. Awareness of technological capabilities at the nanoscale will give future graduates a chance to use them in their work.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U02		is able to employ methods of molecular modeling and to use learned tools for designing nanodevices by himself; can perform the synthesis of simple nanomaterials		[SU4] Assessment of ability to use methods and tools		
	K7_W03		knows the history, current developments and prospects of nanotechnology mainly in the field of chemistry, but also other fields of knowledge		[SW1] Assessment of factual knowledge		
	K7_K03		knows the benefits and risks of using nanomaterials and is able to make the right decisions in this regard		[SK5] Assessment of ability to solve problems that arise in practice
