

Subject card

Subject name and code	Rail traffic control system, PG_00050391						
Field of study	Transport						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Railway Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Sławomir Grulkowski				
	Teachers		dr inż. Sławomir Grulkowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		0.0		0.0	45
Subject objectives	The aim of the course is to provide information on rail traffic management systems, rail traffic control and safety devices and the basic principles of rail traffic management						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W13] has advanced knowledge of the design and management of transport systems to an extent required of the specialty		The student is able to interpret the diagrams of stations in the railway traffic control industry. Can design simple solutions at stations and railway crossings. Can interpret the contradictions of movement		[SW1] Assessment of factual knowledge		
	[K7_U13] able to solve detailed problems of transport systems to an extent required of the specialty		The student is able to interpret movement problems and find a solution. Can count the capacity of a section of a railway line and present conclusions. He knows the traffic control systems for local lines.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K7_W05] has basic knowledge of control in transport systems		The student is able to name the railway traffic control systems. Can interpret the current motor situation. Can name the devices involved in the control process and locate them in the field		[SW1] Assessment of factual knowledge		

Subject contents	LECTURE		
	Introductory information: General outline and control models, Outline of the structure of the railway network, outline of the organization of railway traffic, route and mileage Control circle and setting circle, description of the control process, Outline of the schematic plan and dependency table, Outline of the formal description of the control process Functional and technical classification, Safety, reliability, traffic efficiency. Standards and recommendations, evaluation indicators Railway signaling Outline of propulsion devices, key devices, semi-automatic linear blockade Relay devices at stations - executive systems Automatic line lock Level crossing Remote motion control Communication of information between track and vehicle Radio traffic control on lightly loaded lines European Train Control System Computer assisted traffic control		
	PROJECT		
	Design of the control system and dependence of a small railway station		
	TUTORIALS		
	Identification of contradictory / non-contradictory waveforms		
	Calculation of bandwidth		
	Simulation of the operation of a railway station		
Prerequisites and co-requisites	The student should know the railroad infrastructure, especially the structure of railway turnouts.		
	The student should know the basic assumptions of railway traffic engineering		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	general design of the railway station control system	60.0%	30.0%
	test	60.0%	40.0%
	solving a group of tasks	60.0%	30.0%
