

## Subject card

Subject name and code	Digital Signal Processing, PG_00038187						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Metrology and Information Systems -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Ariel Dzwonkowski					
	Teachers	dr inż. Ariel Dzwonkowski dr inż. Beata Pałczyńska dr hab. inż. Dariusz Świsulski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	5.0		25.0		75
Subject objectives	The aim of the course is to introduce students to the subject of digital signal processing.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U07	The student is able to evaluate the parameters of the signals. The student knows how to apply algorithms of frequency analysis. The student is able to design filters and verify their correct operation. The student is able to analyze multivariate signals.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
	K7_W03	The student knows the types of signals and their characteristics. The student knows the methods of frequency analysis of signals. The student knows the types of filters and the methods of their design. The student knows the algorithms for processing multidimensional signals.			[SW1] Assessment of factual knowledge		
Subject contents	<b>LECTURE</b> The types of signals. Processing A / D and D / A circuits sample & hold S & H. Aliasing. Continuous and Discrete Fourier Transform. Correlation and autocorrelation signals. Filtration signals. Filters of finite and infinite impulse response - how it works, musical, design. Hilbert transform. STFT and wavelet analysis, the basis and application. Two-dimensional signal processing. Examples of applications of digital signal processing. <b>LABORATORY</b> Introduction to Digital Signal Processing in LabVIEW. Sampling, quantization, signal reconstruction, aliasing, spectral analysis. Filters of finite and infinite impulse response. Adaptive filtering. Time-frequency analysis (STFT, wavelet analysis).						
Prerequisites and co-requisites	Basic knowledge of mathematical analysis.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture - midterm colloquium	60.0%	60.0%
	Laboratory - Practical exercise	60.0%	40.0%
