

Subject card

Subject name and code	Introduction to Internet of Things, PG_00054484						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Systems Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Robert Smyk					
	Teachers	dr inż. Robert Smyk					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		8.0		12.0	50
Subject objectives	Introduction to Internet of Things (IoT) systems, getting to know typical architectures, concepts of designing hardware and software for IoT. Introduction to the design aspects of IoT edge devices. Acquisition of basic programming skills in a selected environment dedicated to IoT.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_W11	He can program the elementary method of data transfer using the selected protocol			[SW3] Assessment of knowledge contained in written work and projects		
	K7_U07	He knows the basics of working in the IDE programming environment			[SU4] Assessment of ability to use methods and tools		
	K7_U04	Analyzes the technical data contained in the documentation of the electronic module			[SU2] Assessment of ability to analyse information		
	K7_U03	Can prepare an raport			[SU1] Assessment of task fulfilment		
	K7_W06	He knows the basic architectures of IoT systems			[SW1] Assessment of factual knowledge		
Subject contents	<p>Basic concepts of IoT (internet of things), application examples. What features does a smart device have? Principles of building IoT systems. Layered structure of the IoT system.Examples of selected IoT architectures. Basics of communication in the structure of IoT. Principles of communication programming in the layers of the IoT system (inter-system communication protocols (I2C, SPI, USART etc.), between modular (Bluetooth, ZigBee) and inter-layer (Ethernet, Wifi)). Inter-process programming. Elements of OS / RTOS in IoT. Basics of the IoT cloud, data analysis, visualization. IoT security basics. Managing energy consumption in IoT edge devices.</p>						
Prerequisites and co-requisites	Basics of microprocessor technology, operating systems, basics of programming, computer networks						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	exercises	60.0%			50.0%		
	final project	60.0%			50.0%
