

Subject card

Subject name and code	SURFACE STRUCTURES, PG_00042243						
Field of study	Civil Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Structural Mechanics Department -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Paweł Kłosowski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	Giving the students knowledge on numerical technics used in calculations of structures (e.g. plates, shells, membranes) using the commercial software						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W03] has knowledge of Continuum Mechanics, knows rules of static analysis, stability and dynamics of complex rod, shell and volume structures, both in linear and basic nonlinear regime		Student creates FEM models, carry on calculations and is able to justify the results of calculations		[SW2] Assessment of knowledge contained in presentation		
	[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems		Student creates FEM models, carry on calculations and is able to justify the results of calculations		[SW2] Assessment of knowledge contained in presentation		
Subject contents	PLate structures - theory and applications in FEM. Bending Shell Structures - linear and non-linear theories. Membrane structures - theory FEM modelling linear and non-linear calculations, construction problems. Net structures - theory and proper modelling in FEM, initial prestressing problems. Examples of famous surface structures						
Prerequisites and co-requisites	Basis FEM knowledge						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		two projects	60.0%
