

Subject card

Subject name and code	Intelligent electrical installations, PG_00059860						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2020	Academic year of realisation of subject				2022/2023	
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	6	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Krzysztof Dobrzyński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		10.0		45.0	100
Subject objectives	Mastering the basic design of electrical installations in which the intelligent building system is used.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U04] has the ability to self-educate, among other things, in order to improve professional qualifications	The student improves his skills by searching for information necessary to use in planning and designing classic electrical installations in connection with intelligent building systems.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_K05] can think and act in an entrepreneurial way	The student knows the principles of basic comparative calculation of the basic solutions of the classic electrical installation. The student is able to make a cost estimate of the impact of the intelligent building system on the classic electrical installation.			[SK3] Assessment of ability to organize work		
	[K6_W11] knows the hazards arising from devices, installations, systems and technical systems, basic principles of occupational health and safety, taking into account the role of control and security systems in controlling automation and robotics facilities	The student knows the principles of designing safe power systems. The student knows and applies the rules of occupational health and safety.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_W06] knows the structure of computers and microprocessors and the tasks of operating systems, has basic knowledge of the basics of computer software, drivers, microprocessor technology, design of simple algorithms and the operation of information networks	The student knows the principles of designing the basic algorithms for the operation of intelligent building systems.			[SW1] Assessment of factual knowledge		
	[K6_W07] has basic knowledge related to control and automation systems	The student knows the principles of control in intelligent building systems.			[SW1] Assessment of factual knowledge		
Subject contents	Functions of building automation systems. Principles of operation of decentralized intelligent building systems on the example of the KNX system. Design and execution of a classic electrical installation in coordination with the KNX installation. PV micro-source installations and electric car charging installations as part of the Smart Grid network in buildings. Principles of designing photovoltaic installations.						

Prerequisites and co-requisites	Fundamentals of electrical engineering.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Ocena z projektu	60.0%	50.0%
	Lecture colloquium	60.0%	50.0%
