

Subject card

Subject name and code	Optimisation of Engineering Systems, PG_00059943						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2022/2023		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jacek Małkinia				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		62.0	127
Subject objectives	The aim of the course is to get acquainted with basic optimization methods in design and operation of environmental systems as well as application of computer simulation for optimization of wastewater treatment systems.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K7_W07	The student has advanced knowledge of technologies used for municipal wastewater treatment.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	K7_W04	Solves complex engineering problems in environmental engineering using methods and algorithms that take into account optimization criteria. Conducts an analysis of the impact of technological parameters on the energy consumption in wastewater treatment plants.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	K7_W01	Uses mathematical models of wastewater treatment processes to analyze the functionality and optimize wastewater treatment systems. Based on the developed computer model, optimizes the operation of the treatment plant in terms of reducing energy consumption.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	K7_U07	Formulate an optimization task for a simple environmental engineering system and select an appropriate optimization method. Prepare a computer model of a sewage treatment plant.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
K7_U12	Analyzes and evaluates the technical and economic performance of wastewater treatment systems using computer simulation.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information	
Subject contents	1. Introduction to optimization. The concept of optimization and types of optimization problems.2. Optimization in the decision-making process3. Basic concepts: system, model, simulation, experiment4. General formulation of the optimization problem5. Introduction to network models. Examples of classic optimization problems.6. Introduction to linear programming. Examples of classic optimization problems.7. Examples of optimization problems in sanitary engineering systems (water supply and sewer systems)8. Examples of optimization problems in sanitary engineering systems (wastewater treatment)9. Simulation as an optimization method10. Building a computer model of a wastewater treatment plant. Economic criteria for optimizing the operation of wastewater treatment plants.		
Prerequisites and co-requisites	Not applicable.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		80.0%	5.0%
		55.0%	80.0%
	60.0%	15.0%	
Recommended reading	Basic literature	Geem, Z.W., Ayvaz, M.T. (2011). Optimization in Water & Environmental Engineering. W: Optimization in Civil & Environmental Engineering (ed. Z.W. Geem), Old City Publishing, Philadelphia, PA(USA).	
	Supplementary literature	Pedregal, P. (2003). Introduction to Optimization. Springer.
