

## Subject card

Subject name and code	Ventilation and Air Conditioning II, PG_00059950						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Sylwia Fudala-Książek					
	Teachers	dr hab. inż. Sylwia Fudala-Książek dr inż. Karolina Matej-Lukowicz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
	Additional information: Website for the course on enaucency: <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19967">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19967</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	5.0		30.0		80
Subject objectives	The aim of the course is to introduce the subject of mechanical ventilation and air conditioning. In particular, with the knowledge of ventilation and air conditioning and the shaping of the indoor environment, the basics of acoustics, current legal regulations and standards related to the subject, installation materials and criteria for their selection, design methods and tools supporting design, methods and technologies for the execution of the installations in question, as well as related non-technical considerations.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U10		The student designs a mechanical ventilation system in a building.		[SU1] Assessment of task fulfilment		
	[K7_W11] has knowledge to analyze, evaluate and optimize processes, objects and systems of environmental engineering and knows the principles of rational energy management and resources		The student is able to use concepts and specialist language in the field of ventilation and air-conditioning. The student is able to carry out technical and economic analysis of selected mechanical ventilation solutions. They will be able to determine a rational source of heat and cold.		[SW1] Assessment of factual knowledge		
	K7_W06		The student lists and defines the concepts of media flow in sanitary, thermal or energy systems. Characterise methods and equipment for media flow in sanitary, thermal or energy systems, including mechanical ventilation.		[SW1] Assessment of factual knowledge		
	K7_U03		The student shall produce documentation design of a ventilation installation mechanical ventilation, including technical description, calculations and drawings technical description, calculations and drawings.		[SU1] Assessment of task fulfilment		

Subject contents	<p>LECTURES: Ventilation airflow and its properties. Organisation of room air exchange, air distribution in ventilated rooms. Characteristics of ventilation and air conditioning systems. Air treatment. Air recirculation and heat recovery. Equipment components of mechanical ventilation and air conditioning systems - ducts, fittings and devices. Ventilation and air conditioning units. Dimensioning of mechanical ventilation duct networks. Basics of acoustics. Legal regulations, standards, technical, construction and fire requirements.</p> <p>LABORATORIES: Calculation of ventilation air treatment processes, determination of external and internal heat and moisture gains. Determination of volume flows and ventilation air parameters. Dimensioning and selection of ventilation system components. Operation of ventilation and air conditioning design programs in the Ventpack environment.</p> <p>PROJECT: Design of a mechanical supply and exhaust ventilation system for a set of rooms in a building. Ventilation air balance. Application of the principles of ventilation air distribution and selection of diffusers and extractors. Duct dimensioning. Selection of fittings and equipment. Calculation of pressure drops and control of air volume flows. Design documentation guidelines.</p>														
Prerequisites and co-requisites	Knowledge of the basics of ventilation and air conditioning. Ability to draw in AutoCAD. Knowledge of the subject Ventilation and Air Conditioning in a first degree engineering course. Basic knowledge of hydraulics and fluid mechanics and thermodynamics.
