| | E-learning hours included: 0.0 | | | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in classes include plan | | Participation in consultation hours | | Self-study | | SUM | |
| | Number of study hours | 30 | | 5.0 | | 19.0 | | 54 | |
| Subject objectives | The course will discuss issues related to the processes of control of indoor microclimate. The topics of the course will include the basic issues of climate and microclimate of closed rooms, measurements of physical quantities (including humidity and air temperature, gas concentration) affecting the climate and human well-being, indicators of human comfort and discomfort. A description and issues related to microclimate control systems will be presented, both in the form of theoretical considerations, but also practical solutions actually used will be presented. | | | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | | Method of verification | | | |
| | K7_W04 | | has the ability to assess the stability of automatic control systems regulation | | | [SW1] Assessment of factual knowledge | | | |
| | [K7_W11] has knowledge to analyze, evaluate and optimize processes, objects and systems of environmental engineering and knows the principles of rational energy management and resources | | has the ability to assess damage to peripheral elements of automation | | | [SW1] Assessment of factual knowledge | | | |
| | K7_U06 | | has the basic skills to implement and test the known automatic control systems, to correct the characteristics, to evaluate the stability of the systems | | | [SU3] Assessment of ability to use knowledge gained from the subject | | | |
| Subject contents | Basic concepts of automation, basic principles of automatic control, classification of automation systems. Elements of automatic control systems: measuring devices, controllers, actuators. Basic members of linear automatic control systems. Analysis of linear control systems in the time domain. Open-loop and closed-loop systems. Impulse response. Step response. Frequency analysis of linear control systems. Stability of linear automatic control systems: concept and stability criteria. Automation actuators. Sensors in automation. Control systems in heating, ventilation and air conditioning. | | | | | | | | |
| Prerequisites and co-requisites | | | | | | | | | |
| Assessment methods and criteria | Subject passing criteria | | Passing threshold | | | Percentage of the final grade | | | |
| | Exam | | 50.0% | | | 70.0% | | | |
| | Tests | 50.0% | | | 30.0% | | | | |
