

Subject card

Subject name and code	, PG_00059985						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Michał Szydłowski				
	Teachers		dr hab. inż. Michał Szydłowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	5.0		30.0		80
Subject objectives	Getting knowledge about methods in the field of forecasting flood phenomena and rules for limiting floods and its consequences and flood risk management.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U12	Student is able to determine the transformation of a flood wave in a river and through a retention reservoir and can apply methods of calculating the capacity of multi-part open channels. Student is able to prepare flood hazard and risk maps using a computational model of surface water flow.			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
	K7_U11	Performing flood hazard and risk calculations, student is able to integrate knowledge of hydraulics, hydrology and computational methods, taking into account economic and social aspects.			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	[K7_W08] has knowledge necessary to understand the social, economic, legal and other non-technical determinants of engineering activities and their incorporation in engineering practice	Student knows modern methods of flood risk management in accordance with the Polish Water Law and the European Floods Directive.			[SW1] Assessment of factual knowledge		
K7_W01	Student knows the principles of forecasting floods and methods of reducing floods and its effects.			[SW1] Assessment of factual knowledge			

Subject contents	Floods genesis and classification. Flood risk management basic concepts and strategies. Propagation of flood waves in river beds. Flood risk management in the light of the European Floods Directive and Polish Water Law. Technical means of flood protection active, passive. Designation of flood hazard and risk zones. Rules for the development of floodplains. Methods of reducing the effects of floods. Flood risk assessment.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Calculation tasks	60.0%	25.0%
	Final test (exam)	60.0%	50.0%
	Project presentation	60.0%	25.0%
