| Subject objectives                          | Understanding the processes that affect the migration and transformation of pollutants in the environment (with particular emphasis on surface waters). Classes relate to the basics and principles of building water quality models and are used to show how these models can be used to solve problems in environmental engineering. |                                                          |                                         |                                     |           |                                                                    |         |     |
