GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Design of Electric Systems, PG_00038368						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject	2022/2023			
Education level	second-cycle studies		Subject group				
Mode of study	Part-time studies		Mode of delivery	at the university			
Year of study	1		Language of instruction	Polish			
Semester of study	2		ECTS credits	3.0			
Learning profile	general academic profile		Assessment form	assessment			
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Grzegorz Kostro					
	Teachers	dr inż. Filip Kutt dr hab. inż. Michał Michna					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	10.0	10.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Address on the e-learning platform: https://enauczanie.pg.edu.pl/moodle/course/view.php?id=22422						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	6.0	39.0	75		
Subject objectives	The aim of the course is to introduce students with the methods of analysis, modeling and design of electromechanical drive systems						

Learning outcomes

Course outcome	Subject outcome	Method of verification
K7_W10	Student knows the basic power electronics and drive systems. Student knows the methods of control and diagnostics of power electronic systems.	[SW1] Assessment of factual knowledge
K7_U07	The student is able to analyze the operating states of an electromechanical system fed by a power converter	[SU2] Assessment of ability to analyse information
K7_K03	The student is able to cooperate with others in order to implement the given task.	[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
K7_W13	Student is able to connect, configure and start the drive system fed from the power converter.	[SW1] Assessment of factual knowledge
K7_K02	Student understands the non-technical effects of engineering activities on the environment	[SK5] Assessment of ability to solve problems that arise in practice
K7_U02	Student knows how to prepare and present an oral presentation on a chosen technical topic	[SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
K7_U06	Student can make the analysis, develop the model and simulate the basic operating states of the electric system, can perform the design of electric system	[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
K7_W04	Student knows how to perform the analysis of the electromechanical system in chosen operating states	[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects

Subject contents

Lecture Structures and components of modern electromechanical drive systems. Calculation of equivalent parameters and modelling of complex electromechanical drive systems. Thermal and Electromagnetic analysis of electromechanical transducers using analytical and numerical methods. Analysis of the motion equations and calculation of mechanical transient processes in complex electromechanical drive systems. Design principles of electromechanical drive systems. Selection rules of the required power and drive parameters of different types of electromechanical drive systems.

Laboratory Identification of mechanical and electromagnetic parameters of electromechanical drive system. Study of selected states of a electromechanical system with BLDC motor. Study of selected states of a electromechanical system with induction motor fed by power converter. Study of selected states of a electromechanical system with DC motor fed by DC converter.

Exercises Issues related to project management. Design calculations for the selected electromechanical drive system and the development of a numerical model with the use of CAD programs (thermal and electromagnetic calculations). Modelling of elements of the electromechanical system with the use of programs for calculations using the finite element method. Analysis of selected system operating states based on the results of simulation tests.

Prerequisites and co-requisites

Knowledge in the range of electrical machines and analysis methods of electric and magnetic circuits. Extended knowledge in the field of power electronics. Knowledge in the range of design, programming and diagnostics of power converters.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Project	60.0%	60.0%
Practical exercise	60.0%	40.0%
