

GDAŃSK UNIVERSITY

Subject card

Subject name and code	Time-Space Signal Processing, PG_00048386							
Field of study	Electronics and Telecommunications, Biomedical Engineering, Biomedical Engineering, Biomedical Engineering							
Date of commencement of studies	February 2023		Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction		Polish			
Semester of study	3		ECTS credits		2.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Marine Electronic Systems -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Roman Salamon					
	Teachers prof. dr hab. inż. Roman s				lamon			
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours		n didactic ed in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		2.0		18.0		50
Subject objectives	The aim of the course is to acquire by students the skills of computer simulation of the basic methods of signal processing in the time and space domain in echolocation systems.							

Learning outcomes	Course outcome	Subject outcome	Method of verification		
	[K7_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of advanced technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	Using the written program that simulates the functioning of the system can interpret the impact of individual technical parameters of echolocation systems on its operational parameters.	[SU4] Assessment of ability to use methods and tools		
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student can write a program in MATLAB environment simulating the functioning of a selected hydro or radiolocation system. He is able to design and program the GUI graphical user interface of the selected echolocation system.	[SU4] Assessment of ability to use methods and tools		
	[K7_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	He mastered algorithms of space- time signal processing in echolocation systems and the method of their implementation in the MATLAB environment.	[SW2] Assessment of knowledge contained in presentation		
	[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions	He mastered the ability to design radio and hydrolocation antennas, knows their parameters and their impact on the operation of echolocation systems.	[SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	He knows the methods of space- time signals processing and can apply them to simulation of echolocation systems	[SW1] Assessment of factual knowledge		
Subject contents	 Organization of the course conditions of passing Techniques of remote detection, localization and parameters of objects in the environment Problem of space search duration and techniques of its solutions General structure of multibeam space filters Multielement antennas, their structure Beam patterns and their parameters Basics of delay-and-sum multibeam space filters (DSMSF) Structure and techniques of realizing DSMSF Realization of filters in time domain Realization of narrow-band filters in frequency domain Realization of wide-band filters in frequency domain Realization of the chniques of beam focusing Electronic steering of transmission beam Space spectrum and the direction of wave arrival Fourier method of space spectrum estimation: parametric methods of spectrum estimation High resolution methods 				
Prerequisites and co-requisites					
Assessment methods and criteria	Subject passing criteria Project Midterm colloquium	Passing threshold 60.0% 60.0%	Percentage of the final grade 70.0% 30.0%		
Recommended reading	Basic literature	 R. Salamon Systemy hydrolokacyjne. Wyd. Gdańskie Towarzystwo Naukowe, Gdańsk 2006 A.V. Oppenheim, R.W. Schafer Digital Signal Processing. Prentice- Hall, Englewood Clifs 1975
