

Subject card

Subject name and code	Radio Communication Antennas and MIMO Techniques, PG_00048375						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			1.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Radiocommunication Systems and Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jarosław Magiera				
	Teachers		dr inż. Jarosław Magiera				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	Familiarization with the construction and operation of the main types of radio antennas. Familiarization with MIMO transmission technique: its fundamentals, variants and state of the art.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	Knows and understands the structure and operation of various types of radio antennas as well as the structure and operation of MIMO multi-antenna links.			[SW3] Assessment of knowledge contained in written work and projects		
	[K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.	Knows and understands the mathematical description used in electromagnetic analysis and design of linear antennas			[SW3] Assessment of knowledge contained in written work and projects		
	[K7_W02] Knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	Knows and understands physical phenomena occurring in the antenna, associated with the conversion of an electric current into an electromagnetic field and vice versa.			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>Part 1:</p> <ol style="list-style-type: none"> 1.Fundamentals od antenna theory field and circuit properties 2.Antenna selection for given requirements 3.Linear antennas 4.E-M analysis of linear antenna 5.Aperture antennas 6.Antenna arrays 7.Antenna measurements 8.Antenna size reduction <p>Część 2:</p> <ol style="list-style-type: none"> 1.Fundamentals of MIMO technique 2.Spatial multiplexing 3.Algorithms of detection in a link with spatial multiplexing 4.Channel coding in MIMO 5.MIMO in frequency-selective channels 6.Spatial diversity 7.Transmit diversity space-time coding 8.Antenna diversity for reception 9.Multi-user MIMO (MU-MIMO) 10.Cooperative MIMO 11.Massive MIMO 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Accept	50.0%	100.0%
