	[K6_U01] is able to acquire information from literature, databases and other, properly chosen sources, integrate these information, interpret them, draw conclusions and formulate opinions		Student uses graphs and tables of the physical properties to prepare laboratory reports. Student is able to interpret the results of energy balance of various machines.		[SU1] Assessment of task fulfilment		
	[K6_U03] has self-learning skills		Student broadens his knowledge in areas related to the thermodynamics.		[SU2] Assessment of ability to analyse information		
	[K6_W02] has a knowledge in term of physics that includes mechanics, thermodynamics, optics, electricity, magnetism, atomic physics, nuclear physic, solid state physics, including the knowledge necessary to understand basic phenomena occurring in mechatronic elements and systems and its surroundings		Student defines the concepts of thermodynamics, 1st and 2nd Law of Thermodynamics and thermal/ caloric equations of state. Student understands the energy conversion processes in the mechatronic systems.		[SW1] Assessment of factual knowledge
