

Subject card

Subject name and code	, PG_00056127						
Field of study	Mechatronics						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Mirosław Gerigk				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	The aim of the lectures is to present to the students the basic technologies associated with development of the unmanned and autonomous vehicles starting from the technologies concerning the remote operated vehicles ROV, unmanned arial vehicles UAV, unmanned ground vehicles UGV, unmanned surface vehicles USV, unmanned underwater vehicles UUV and all the unmanned autonomous vehicles of the mentioned types.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W11] has knowledge about the life cycle of mechatronic systems and objects	A student has the basic knowledge on the life cycle of the unmanned vehicles including their mechatronic subsystems.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K6_W10] has knowledge about development trends in the field of engineering and technology sciences and scientific disciplines: Mechanical Engineering, Automation, Electronics, Electrical Engineering and Space Technologies, adequate for Mechatronics course	A student has the basic knowledge concerning the further development of sciences, technologies and implementations connected with the unmanned vehicles including the mechanical engineering, automation and robotics, electrotechnics and electronics, etc.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K6_U05] is able to use properly chosen tools to compare design solutions of elements and mechatronics systems according to given application and economic criteria (e.g. power demand, speed, costs)	A student is able to choose and use the tools including the methods, models and algorithms to perform the analysis concerning the implemented subsystems of the unmanned vehicles according to the operational criteria.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_U06] is able to identify and formulate specification of simple, practical engineering tasks, distinctive for mechatronics	A student is able to identify and formulate the simple tasks associated with implementations concerning the unmanned vehicles which are closely connected with mechatronics.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_W08] knows and understands design and production processes of elements and simple mechatronic devices	A student has an ability to analyze the basic technologies necessary to design and manufacture the elements and simple mechatronic subsystems for the data unmanned vehicle.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
Subject contents	<p>The lectures concern, in turn the key technologies associated with the unmanned vehicles:</p> <ul style="list-style-type: none"> - autonomous systems - sensors and effectors - materials (AI materials, nano-materials) - energy supply - innovative propulsion - IT technologies (communication, navigation, steering) - stealth - cosmic and satellite technologies and - others 		
Prerequisites and co-requisites	The student should have basic information in the field of applied physics and mathematics, mathematical analysis, numerical methods, mechanics, including kinetics and dynamics, automation, robotics, electrotechnics, electronics and basics of programming.		

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Half-exam and exam	56.0%	100.0%
