

## Subject card

Subject name and code	, PG_00056114						
Field of study	Mechatronics						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Krzysztof Kaliński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	Acquiring methods of modelling and simulation of dynamic phenomena in machine tools together with accompanying production processes.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W10] has knowledge about development trends in the field of engineering and technology sciences and scientific disciplines: Mechanical Engineering, Automation, Electronics, Electrical Engineering and Space Technologies, adequate for Mechatronics curse		Student analyse tool-workpiece vibration using selected models of cutting dynamics		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] is able to use properly chosen tools to compare design solutions of elements and mechatronics systems according to given application and economic criteria (e.g. power demand, speed, costs)		Student chooses optimal parameters of machining process according to a selected criteria.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W08] knows and understands design and production processes of elements and simple mechatronic devices		Student identifies method for counteracting negative dynamical effects in machine tools		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U06] is able to identify and formulate specification of simple, practical engineering tasks, distinctive for mechatronics		Student solves problems of machine tool dynamics and milling processes on the basis of computer simulations		[SU4] Assessment of ability to use methods and tools		
Subject contents	LECTURES. Introduction: Free vibration. Forced vibration. Self-excited vibration. Modelling methods in dynamics of machine tools and machining processes: Rigid finite element method. Mixed method of finite elements. Stationary systems and systems whose configuration changes with time. Dynamics of the machine tool main driving system: Steady and unsteady states. Transverse, torsion and transverse-torsion vibration. Dynamics of the machine tool carrying system: Rigid and flexible structures of machine tools. Flexibility of constructional and slideway joints. Dynamics of the feed drive: The stick-slip self-excited vibration. Dynamics of cutting process: Proportional model. Kudinov model. Tobias-Fishwick-Das model. Nosyrieva-Molinari model. Jemielniak model. Inner and outer modulation of the cutting zone thickness. Tool-workpiece relative vibration: Self-excited chatter vibration. Turning. Flat surface milling. Curved surface machining. Dynamic problems of the metal high speed machining: Flexible end milling of rigid details. Milling of flexible details. Methods of vibration surveillance in time and frequency domain.						

Prerequisites and co-requisites	Knowledge on subject Mechanics. Knowledge in scope of the mechanical vibration problems. Knowledge and experience in subject Fundamentals of automatic control. Knowledge on subject Modern machine tools and production processes. Knowledge and experience in subject Programming of Computer Systems. Skills of defining and solving the problems of mechatronic design .		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	3 team projects	100.0%	100.0%
