

Subject card

Subject name and code	Programming of computer systems, PG_00060472						
Field of study	Mechatronics						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Zakład Mechatroniki -> Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marek Galewski					
	Teachers	dr inż. Yurii Tsybrii dr hab. inż. Marek Galewski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	10.0		55.0		125
Subject objectives	Teaching students of structural (in C language) and object oriented programming (n Java) basics, relational databases and essentials of software engineering (software lifecycle, development methods, system modelling).						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U09] is able to formulate an algorithm, knows low and high level programming languages and appropriate IT tools for developing computer programmes to control mechatronic system	Student develops simple structural and object oriented programs in C and Java			[SU1] Assessment of task fulfilment		
	[K6_W06] has organised knowledge in the field of informatic that includes architecture of computer systems, programming of computers and embedded systems and elements of software engineering	Student understands basic principles of structural and object oriented programming			[SW1] Assessment of factual knowledge		
	[K6_W11] has knowledge about the life cycle of mechatronic systems and objects	Student describes life cycle of IT systems and selected methods of development of such systems			[SW1] Assessment of factual knowledge		
	[K6_U05] is able to use properly chosen tools to compare design solutions of elements and mechatronics systems according to given application and economic criteria (e.g. power demand, speed, costs)	Student presents basic skills in modern programming tools and techniques			[SU4] Assessment of ability to use methods and tools		

Subject contents	Programming in C language: basic elements of the C language, basic elements of program, functions, conditional statements, loops, I/O operations, array operations, strings, pointers; Programming in Java language: basic elements of the Java language, elements of object oriented programming (Classes, objectd, inheritance), I/O operations, collections, programming for GUI ; Software engineering: software life-cycle, development tehniques UML modelling language; Relational databeses (SQL);			
Prerequisites and co-requisites				
Assessment methods and criteria	Subject passing criteria		Passing threshold	Percentage of the final grade
	Individual projects		50.0%	20.0%
	Obligatory project excercises		60.0%	20.0%
	Written exam		52.0%	60.0%
Recommended reading	Basic literature		[1] M. Galewski: Lecture materials published at the eNauczenie website [2] M. Galewski, P. Duba: Laboratory exercises handbooks (C/ Java)	
	Supplementary literature		Kernighan B.W, Ritchie D.M, The C Programming Language, Prentice-Hall, 1988 Horstmann C.S, Java. Podstawy. Helion, 2019 (ew. wcześniejsze, ale niezbyt stare wydania) Schmuller J., UML dla kazdego, Helion 2003	
	eResources addresses		Adresy na platformie eNauczenie: Programowanie Systemów Komputerowych, W/P, MTR, I st., sem. 02, letni 2023/24 (PG_00060472) - Moodle ID: 34738 https://enauczenie.pg.edu.pl/moodle/course/view.php?id=34738	
Example issues/ example questions/ tasks being completed	The list of sample questions for the exam (around 50) and laboratory individual projects (around 40) are given to the student during the semester. Sample examination questions: - How does type cast operation work? When do we use it and why? Provide examples of type casting in C. - What is pointer data type used for? When do we use it? What are it's advantages? What danger it brings for a program? Provide an example of pointer declaration and initialization. - Describe principles of Object Oriented Analysis, Modelling and Design. - Describe basic elements of relational data model.			
Work placement	Not applicable
