

Subject card

Subject name and code	Marine Environment Protection, PG_00060524						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division of Marine Power Plants -> Institute of Naval Architecture -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Roman Liberacki				
	Teachers		dr inż. Roman Liberacki				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		33.0	50
Subject objectives	Familiarizing students with technical and legal issues in the field of protection of the marine environment against pollution from ships and marine structures.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W03] has knowledge of hydromechanics, thermodynamics, machine design, ecology, materials science necessary to understand the principles of construction and operation of ocean engineering facilities and equipment		The student knows what hazards the ship may pose to the natural environment and knows how to counteract these hazards.		[SW1] Assessment of factual knowledge		
	[K6_K03] is aware of the impact of non-technical aspects on the engineer's work and the impact of engineering activities on the natural environment		The student is aware of the negative impact of ships and marine structures on the natural environment and the need to respect the legal regulations in the design and operation of such units.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W07] has knowledge of the principles of sustainable development		The student knows the rule of sustainable development.		[SW1] Assessment of factual knowledge		
Subject contents	Introduction, the principle of sustainable development, the definition of marine environment pollution, sources of sea water and atmosphere pollution, legal aspects in this area. Conventions: MARPOL , Helkom, BWM. Natural environment pollutants: oily substances, sanitary sewage, garbage, harmful substances contained in exhaust gases and organisms in ballast water, the other pollutants. Sources of formation of the above-mentioned pollutants on ships. Legal, organizational and technical ways to limit their emission. Environmental protection devices mounted on ships, yachts, platforms. Vibrations and noises. Oil tanker disasters, Combating oil pollution. The problem of scrapping of ships. Environmental protection devices in ports. Decarbonization in shipbuilding, low-emission and zero-emission ships.						
Prerequisites and co-requisites	No special requirements.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Written colloquium		50.0%		100.0%
