

Subject card

Subject name and code	Fundamentals of the Ship Systems, PG_00060533						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Siłowni Okrętowych -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Zbigniew Korczewski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	To teach the build, requirements and principles of exploiting the marine power plant and pipeline systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems		Student describes and explains the purpose of the solutions used in relation to typical ship system solutions. Explains the general construction of typical solutions structural ship installations on ships with internal combustion engines. Indicates the classification conditions affecting the structure of the installation.		[SW1] Assessment of factual knowledge		
	[K6_U04] has skills that allow for self-education and preparation for work in an industrial environment, including the application of occupational health and safety rules		Student knows how to use public available as well as specialized and dedicated Internet resources and software when selecting criteria and comparative analysis of different types of ship systems. Applies general principles of proper use of equipment and systems during laboratory exercises on a computer simulator.		[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W07] has knowledge of the principles of sustainable development		Student is able to determine the influence of technical solutions applied in ship power system (e.g. type of main propulsion) on environmental risks.		[SW1] Assessment of factual knowledge		

Subject contents	Lecture		
	The definition of the maritime system, function and classification of the maritime systems, formal and legal requirements in regards to the system and maritime equipment, the ship's movement ability - general information about the power transmission system, general information about the maritime systems, fire protection systems, bilge and ballast systems, sanitary systems of the ship, ventilation and conditioning, ship's refrigeration system and equipment. Dynamic positioning systems. Mooring and anchoring systems. Reliability of the ship's functioning. Ecological aspects of maritime systems' usage.		
	Laboratory		
	General construction, principle of operation, preparation for operation and use of selected ship systems - exercises on the simulator of ship systems and ship power system.		
Prerequisites and co-requisites	Knowledge of the subjects: Technical mechanics, Construction and operating of machinery		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical skills - laboratory	100.0%	15.0%
	Midterm colloquium - lecture	51.0%	85.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	1. The main energy systems of the ship - classification, functions. 2. General scheme of ballast system. 3. General propulsion efficiency vs. general energy efficiency - interpretation. 4. Construction and principle of operation of freshwater production equipment. 5. Methods of reducing NOx and SOx emissions. 6. Equipment redundancy in marine power systems. 7. Difference between ventilation and air conditioning.		
Work placement	Not applicable
