

## 

## Subject card

Subject name and code	Fluid Mechanics, PG_00060584							
Field of study	Design and Construction of Yachts							
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	2		Language of instruction		Polish	Polish		
Semester of study	3		ECTS cred	its		7.0	7.0	
Learning profile	general academic profile		Assessment form		exam	exam		
Conducting unit	Department of Theory and Ship Design -> Faculty of Mechanical Engineering and Ship Technology						nology	
Name and surname	Subject supervisor		dr hab. inż. Paweł Dymarski					
of lecturer (lecturers)	Teachers				-			-
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	15.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	rning activity Participation in classes includ plan				Self-study SUM		SUM
	Number of study hours	60		6.0		109.0		175
Subject objectives	To familiarize students with the basic concepts and laws of fluid mechanics, such as: - density, viscosity, compressibility, surface tension, - Static equilibrium equations of fluid, hydrostatic pressure, fluid forces on straight surfaces, etc. - Continuity equation, - The principle of momentum conservation, - Calculation of hydrodynamic forces, - The principle of conservation of energy for non-viscous fluid, incompressible flow (Bernoulli eq.) - Basic issues of viscous liquid flow, determination of losses in the flow. - The concept of the stress tensor in a real (viscous) fluid.							
Learning outcomes	Course outcome		Subject outcome		Method of verification			
	[K6_W02] has knowledge in the field of technical mechanics, fluid mechanics, strength of materials, necessary to understand the basic physical phenomena occurring in ocean engineering		Knows basic concepts and methods in the field of fluid mechanics, can solve basic FM tasks		[SW3] Assessment of knowledge contained in written work and projects			
	[K6_K02] can work in a team, assuming various roles, can act in a rational and ethical way		Working in a team, he is able to solve more complex fluid mechanics tasks and develop results from laboratory exercises		[SK5] Assessment of ability to solve problems that arise in practice			
	[K6_W03] has knowledge of hydromechanics, thermodynamics, machine design, ecology, materials science necessary to understand the principles of construction and operation of ocean engineering facilities and equipment		Has knowledge of hydromechanics necessary to understand the principles of construction and operation of yachts			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	The course consists of lectures and	exercises					
	Scope of the course: The main properties of fluids:						
	- The density, viscosity, compressibility, surface tension, Basic concepts:						
	- Particle fluid - The pressure, shear stress,						
	- Pascal's law.						
	Fluid statics:	tions of fluid					
	- The hydrostatic equilibrium equations of fluid - The hydrostatic pressure formula,						
	- Pressure force to the flat surface						
	<ul> <li>- The concept of the center of pressure force,</li> <li>- Calculation of the moment of pressure force.</li> </ul>						
	Buoyancy, center of buoyancy.						
	- Stability of floating bodies (ships)						
	Metacentric radius, Metacentric height,						
	Equilibrium conditions.						
	The main issues of fluid kinematics:						
	- A description of the motion of fluids: Eulerian method,						
	Lagrangian method						
	- Determination of position, velocity and acceleration of the fluid,						
	- The concept of the path of the fluid particles (pathline), streamline, streamsurface, streamtube The principle of conservation of mass (continuity equation):						
	- The concept of the mass flow rate the volumetric flow rate,						
	<ul> <li>The concept of control surface, control volume</li> <li>Calculation of the flow velocity at varying cross channel</li> </ul>						
	The principle of conservation of energy for perfect fluid, incompressible flow (Bernoulli's equation):						
	- Solving one-dimensional flow problems in channels: determination of the flow rate and pressure.						
	The principle of conservation of momentum, - The concept of a volume of liguid,						
	- Guiding principles of conservation of momentum in the form of integral,						
	- Calculation of hydrodynamic forces, The concent of the stress tensor in a real(viscous) fluid						
	The concept of the stress tensor in a real(viscous) fluid. Basic issues of the real fluid flow, determination of loss in the flow:						
	- Generalized Bernoulli equation,						
	- Determining the amount of local loss and linear : Types of flow of real fluids:						
	Laminar flow						
	Transitional flow,						
	Turbulent flow.						
Prerequisites	Knowledge of the basic concepts of physics / mechanics:						
	- Force (force vector)						
		physics / mechanics.					
and co-requisites	- Torque,	priysics / mechanics.					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> </ul>	ic energy,					
	- Torque, - The arm of force, - What is the pressure (?)	ic energy,					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> </ul>	ic energy, e concepts,					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> </ul>	ic energy, e concepts,					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> </ul>	ic energy, e concepts, calculus / calculus					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> <li>Ordinary differential equations with</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> <li>Ordinary differential equations with</li> <li>The surface integral, volume integral</li> <li>Knowledge of algebra:</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables al					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> <li>Ordinary differential equations with</li> <li>The surface integral, volume integral</li> <li>Knowledge of algebra:</li> <li>The transformation of algebraic explanation</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables al					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> <li>Ordinary differential equations with</li> <li>The surface integral, volume integral</li> <li>Knowledge of algebra:</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables al					
	<ul> <li>Torque,</li> <li>The arm of force,</li> <li>What is the pressure (?)</li> <li>Momentum, potential energy, kinet</li> <li>Knowledge of units related to abov</li> <li>Knowledge of the basic concepts of</li> <li>Definite integral,</li> <li>Derivative of the function,</li> <li>Basic ability to apply integrals in pr</li> <li>Ordinary differential equations with</li> <li>The surface integral, volume integr</li> <li>Knowledge of algebra:</li> <li>The transformation of algebraic exist</li> <li>The ability to "take before the pare</li> <li>Algebra of vectors:</li> </ul>	ic energy, e concepts, calculus / calculus oblems of physics separated variables al
