

Subject card

Subject name and code	Object Programming and Data Analytics, PG_00060643						
Field of study	Transport and Logistics						
Date of commencement of studies	October 2023	Academic year of realisation of subject				2024/2025	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	3	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Division of Applied Computer Science -> Institute of Naval Architecture -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Życzkowski				
	Teachers		dr inż. Marcin Życzkowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		47.0	100
Subject objectives	Application of the programming language (PYTHON) to solve transport problems using real data such as: AIS, GPS, VTS, Bitmap. On the basis of the obtained data, the student analyzes the data. It prepares the obtained data for the implementation of a specific task. During the task, the student uses the previously learned Python libraries: Pandas, NumPy, Matplotlib.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W04] has well established knowledge in the field of computer science, electronics, automation and control, information technology and computer graphics, useful for understanding the possibilities of applying them in transport		Learning to conduct basic analyzes using models created in PYTHON. Acquisition of algorithm design skills		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation		
	[K6_U01] can obtain information from literature, databases and other sources; verify and systematize the information obtained, interpret it and draw conclusions, formulate and justify opinions		The student is able to independently develop a final report for the completed project in the PYTHON environment		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
Subject contents	The student has a task (project) to complete. The teacher provides data on the movement of the sea vessel. The student's task is to visualize the route of the sea vessel on the map (Basemap). Perform ship motion analysis. Prepare a report in the form of a txt file, which will contain information every 30 minutes about its position, speed, course. In addition, the report should contain information about the type of ship (basic data), average speed, minimum and maximum speed.						
Prerequisites and co-requisites	the basics of the Python language						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Project		50.0%		100.0%		

Recommended reading	Basic literature	https://docs.python.org/pl/3/tutorial/index.html https://helcom.fi/baltic-sea-trends/data-maps/ http://data.bshc.pro/#2/53.8/12.5
	Supplementary literature	https://www.udemy.com/topic/python/
	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	Ship movement data transformation, AIS data, GPS data Transformation and visualization of bathymetric data. Statistical analysis tasks: mean, variance, etc.	
Work placement	Not applicable	

Document generated electronically. Does not require a seal or signature.
