

Subject card

| | | | | | | | |
|---|--|---|----------|-------------------------------------|--|------------|-----|
| Subject name and code | Renewable energy sources, PG_00060853 | | | | | | |
| Field of study | Chemical Technology | | | | | | |
| Date of commencement of studies | October 2023 | Academic year of realisation of subject | | | 2024/2025 | | |
| Education level | first-cycle studies | Subject group | | | Obligatory subject group in the field of study Subject group related to scientific research in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 2 | Language of instruction | | | Polish | | |
| Semester of study | 3 | ECTS credits | | | 2.0 | | |
| Learning profile | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | Department of Energy Conversion and Storage -> Faculty of Chemistry | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | prof. dr hab. Ewa Klugmann-Radziemska | | | | | |
| | Teachers | dr inż. Anna Dettlaff | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 0.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 30 | | 2.0 | | 18.0 | 50 |
| Subject objectives | Presentation of knowledge in the field of natural resources management and their use as renewable energy sources. Analysis of the possibilities of using solar, biomass, water, wind and nuclear energy to produce electricity and heat. Gaining knowledge on the measurement of basic physical parameters related to obtaining energy from renewable sources. | | | | | | |
| Learning outcomes | Course outcome | Subject outcome | | | Method of verification | | |
| | [K6_W03] has knowledge of environmental protection in chemical technology, the classification of technological processes in terms of their environmental impact and how to eliminate the environmental impact of technological installations | the student has knowledge about environmental protection in chemical technology | | | [SW1] Assessment of factual knowledge | | |
| | [K6_K02] understands the non-technical aspects and implications of the activities of a chemical engineer, including the impact on the environment, is aware of professional behaviour, observance of professional ethics and respect for diversity of views and cultures | the student understands non-technical aspects and effects of the activities of a chemical engineer, including the impact on the environment | | | [SK2] Assessment of progress of work | | |
| | [K6_W12] knows the chemical nomenclature in Polish and specialized terms related to chemical technology | the student knows the chemical nomenclature in Polish and specialist terms related to chemical technology | | | [SW1] Assessment of factual knowledge | | |

| Subject contents | <ol style="list-style-type: none"> 1. Introduction to renewable energy sources, including current EU regulations on renewable energy sources. 2. Consequences of using conventional energy sources: acid rain, smog (temperature inversion phenomenon; London-type smog, Los Angeles-type smog, Polish-type smog; global warming (greenhouse effect phenomenon; fast and slow carbon cycle, carbon thermostat; mechanisms and feedbacks controlling climate change; climate models) 3. Discussion of the potential of renewable energy in Poland, including the availability and use of various renewable energy sources: geographical conditions: explanation of what geographical factors influence the choice and location of renewable energy installations in Poland and worldwide. examples of towns and regions with high potential for various renewable energy sources. 4. Use of solar energy (low- and high-temperature solar energy systems; active and passive systems; solar collectors; photovoltaic cells; solar farms; helioelectric power plants; solutions used in passive construction). 5. Technologies for the production and use of hydrogen. Hydrogen economy. Use of biomass, biofuels, biogas. 6. Biogas plants powered by waste biomass. 7. Integrated methods of using available renewable energy sources. 8. Installation and device diagrams: presentation of various diagrams and structures of installations based on renewable energy sources, together with a discussion of the devices used, their functions and role in the process of obtaining energy. 9. Energy storage methods: discussion of technologies related to energy storage (batteries, capacitors, fuel cells, etc.) | | | | | | | | |
|--|---|--|--|--------------------------|-------------------|-------------------------------|------|-------|--------|
| Prerequisites and co-requisites | NA | | | | | | | | |
| Assessment methods and criteria | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 33%;">Subject passing criteria</th> <th style="width: 33%;">Passing threshold</th> <th style="width: 33%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>test</td> <td>60.0%</td> <td>100.0%</td> </tr> </tbody> </table> | | | Subject passing criteria | Passing threshold | Percentage of the final grade | test | 60.0% | 100.0% |
| Subject passing criteria | Passing threshold | Percentage of the final grade | | | | | | | |
| test | 60.0% | 100.0% | | | | | | | |
