

Subject card

Subject name and code	, PG_00056306						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject				2023/2024	
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	4	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Faculty of Ocean Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Daniel Piątek					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Knowledge of the operation principles of hydrostatic drive of machines, widely applied in drive and control of ocean technology and ship equipment						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems	The student is able to design a hydrostatic system and select its elements			[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems	The student is able to optimize the functioning structure of the hydrostatic system			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U03] can use computer-aided design, production and operation tools for ocean technology objects and systems	As part of the design of the hydraulic system, the student is able to create simple spreadsheets to facilitate calculations and use the sources of information available on the Internet			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		
Subject contents	<p>LECTURES: Basic properties of the hydrostatic drive and control; displacement machines; working fluids; hydraulic flows of viscous fluid; drive and control elements; hydrostatic transmissions; classification and graphical symbols of hydrostatic system elements; pressure and flow intensity control valves; pumps and hydraulic motors used in hydrostatic drives; throttling control of hydraulic motor speed in the individual and group systems.</p> <p>LABORATORY: Filters, conduits, joints, seals; flow in the straight conduit; determination of throttling valve characteristics; valves in hydraulic systems; characteristics of the overflow valves; slid directional valve; pumps and hydraulic motors; testing of the displacement pump energy efficiency.</p>						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	laboratory - report	60.0%			50.0%		
	lecture - test	60.0%			50.0%
