

Subject card

Subject name and code	, PG_00056308						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Energetyki i Automatyki Morskiej -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marek Dzida					
	Teachers	dr hab. inż. Marek Dzida mgr inż. Jacek Frost					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	10.0		30.0		100
Subject objectives	Provide knowledge of thermal rotor machines allows preliminary design cycle of gas and steam turbines, the combined cycles.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems	The student is able to formulate simple engineering problems and its specification in the range of rotor rotating machinery.			[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems	The student has the knowledge of methods and tools applied for design of steam and gas turbine			[SW1] Assessment of factual knowledge		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems	The student is able to formulate simple engineering problems and its specification in the range of rotor rotating machinery.			[SW1] Assessment of factual knowledge		
	[K6_U04] has self-education skills in order to improve professional qualifications, is ready to work in industrial environment, adheres to HSE rules and regulations	The student is able to find additional information in the field of rotating machinery			[SU4] Assessment of ability to use methods and tools		

Subject contents	<p>1. Cycles of steam turbine (Clausius-Rankine cycle, cycle with reheating, heat-regenerative feedwater, steam cycle of nuclear power plants, calculating the steam cycle). 2. Cycles of gas turbines (simple open cycle, open-cycle complex (regenerative, intercooled, with the "reheat" in additional combustion chambers), closed cycle, calculation of gas turbine cycle). 3. Steam and gas turbine combined cycle (with supplementary firing or without it). 4. The theory of expansion nozzles (basic equations of motion of the gas, the calculation of nozzles and extension work in varying conditions nozzles, turbine profile types, characteristics of palisade vane and rotor - the geometric parameters and flow). 5. Energy losses in flow through the palisade turbine (classification of losses, the impact of geometric parameters and motor losses on individual components, the selection of the main parameters of the palisade). 6. Theory of axial stage (main flow equation for the stage, the efficiency of peripheral indicators of the stage, the characteristics of efficiency, selection of basic design parameters, the stage of Curtis; stages with long blades). 7. Another losses (friction loss of rotor blades, ventilation loss, leakage loss, the internal efficiency of turbine stage). 8. Multi-stage turbines (basic types of construction of turbines, turbine efficiency rating).</p>		
Prerequisites and co-requisites	Thermodynamics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lecture - final test	50.0%	50.0%
	lab	60.0%	20.0%
	exercises	50.0%	30.0%
