## Subject card

| Subject name and code | Technical Mechanics 2, PG_00056192 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Field of study | Transport and Logistics |  |  |  |  |  |  |
| Date of commencement of studies | October 2022 |  | Academic year of realisation of subject |  |  | 2023/2024 |  |
| Education level | first-cycle studies |  | Subject group |  |  |  |  |
| Mode of study | Full-time studies |  | Mode of delivery |  |  | at the university |  |
| Year of study | 2 |  | Language of instruction |  |  | Polish |  |
| Semester of study | 3 |  | ECTS credits |  |  | 11.0 |  |
| Learning profile | general academic profile |  | Assessment form |  |  | exam |  |
| Conducting unit | Zakład Mechaniki Konstrukcji Oceanotechnicznych -> Institute of Ocean Engineering and Ship Technology > Faculty of Mechanical Engineering and Ship Technology |  |  |  |  |  |  |
| Name and surname of lecturer (lecturers) | Subject supervisor |  | dr hab. inż. Tomasz Mikulski |  |  |  |  |
|  | Teachers |  | dr inż. Maciej Kahsin mgr inż. Olga Kazimierska dr hab. inż. Beata Zima dr inż. Jakub Kowalski mgr inż. Paweł Bielski dr hab. inż. Tomasz Mikulski dr inż. Michał Krężelewski mgr inż. Alicja Bera |  |  |  |  |
| Lesson types and methods of instruction | Lesson type Lecture |  | $\begin{array}{\|l\|} \hline \text { Tutorial } \\ \hline 45.0 \\ \hline \end{array}$ | Laboratory | Project | Seminar | SUM |
|  | Number of study hours | 60.0 |  | 15.0 | 0.0 | 0.0 | 120 |
|  | E-learning hours included: 0.0 |  |  |  |  |  |  |
|  | Additional information: <br> Lectures, exercises and laboratories are conducted in the system of full-time education. |  |  |  |  |  |  |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan |  | Participation in consultation hours |  | Self-study | SUM |
|  | Number of study hours | 120 |  | 15.0 |  | 140.0 | 275 |
| Subject objectives | The aim of the course is to provide theoretical foundations of mechanics and strength regimes of onedimensional structures (rods, beams). Student after the course should be able to: <br> - determine the distributions of internal forces and moments <br> - determine the stress distribution, <br> - calculate the displacements of one-dimensional structures, <br> - indicate the place of the greatest material effort at typical structure loads, <br> - calculate the effort of material using a variety of strength material hypothesis. |  |  |  |  |  |  |

| Learning outcomes | Course outcome | Subject outcome | Method of verification |
| :---: | :---: | :---: | :---: |
|  | [K6_W02] has a basic knowledge in physics, including technical mechanics, fluid mechanics, solidstate physics, optics and acoustics necessary to understand basic physical phenomena occurring in transport | The student has acquired the ability to solve technical problems based on the laws of mechanics and basic material strength analysis. | [SW1] Assessment of factual knowledge <br> [SW3] Assessment of knowledge contained in written work and projects |
|  | [K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task | The student is able to perform strength analyzes of elements of structural systems and ship or port facilitiy devices. | [SU1] Assessment of task fulfilment <br> [SU3] Assessment of ability to use knowledge gained from the subject <br> [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task |
| Subject contents | 1. Basics assumptions and description of the Strength of Materials problems. <br> 2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law. <br> 3. Axial tension and compression of the rod. <br> 4. The internal forces. Statically determinate structures: beams, trusses and frames,frame-truss systems. Cross-sectional axial forces, shear forces, bending moments, torsional moments. <br> 5. Moments of inertia of plane figures. <br> 6. Bending of beams. <br> 7. Torsion of monolithic and thin-walled bars. <br> 8. Eccentric tension (compression) of the bar. <br> 9. Shear stresses in bending problems. <br> 10. Bending line of beam. Euler's equation. <br> 11. Buckling of axially compressed rods. <br> 12. Strength hypothesises. Complex stress problems. <br> 13. Vibrations of a system with one degree of freedom: free and forced vibrations. <br> 14. The phenomenon of resonance, vibration damping. <br> 15. Introduction to vibrations of systems with many degrees of freedom. |  |  |
| Prerequisites and co-requisites | The student has passed the following subjects: - Technique Mechanic I |  |  |
| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|  | exam | 50.0\% | 30.0\% |
|  | exercise | 50.0\% | 50.0\% |
|  | laboratory | 50.0\% | 20.0\% |
