

Subject card

Subject name and code	Technical Diagnostics (WOiO), PG_00042088									
Field of study	Power Engineering, Power Engineering									
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024					
Education level	first-cycle studies		Subject group							
Mode of study	Full-time studies		Mode of delivery		at the university					
Year of study	3		Language of instruction		English					
Semester of study	6		ECTS credits		4.0					
Learning profile	general academic profile		Assessment form		assessment					
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology									
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Zbigniew Korczewski							
	Teachers									
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar				
	Number of study hours	15.0	0.0	0.0	15.0	30				
E-learning hours included: 0.0										
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		SUM				
	Number of study hours	30		5.0		65.0				
100										
Subject objectives	<p>To teach theoretical basis of a technical diagnostics as well as explain diagnostic methods and means applied within energy machines and devices.</p> <p>To train practical skills within the range of engines' and working machines' diagnostics.</p>									

Learning outcomes	Course outcome	Subject outcome	Method of verification									
	[K6_K04] is able to formulate opinions on technical and technological processes in energy and sanitary engineering											
	[K6_W13] has basic knowledge of the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, internal combustion engines, compressors and rotating machines, has basic knowledge of the regulation of energy equipment and methods of their selection depending on the needs											
	[K6_W12] has basic knowledge of the life cycle and repairs of energy equipment in the field of thermal power stations, thermal and energy systems and heating systems, internal combustion engines and compressors as well as rotating machines											
	[K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources											
Subject contents	<p>Lecture: Basic notions and definitions: the concept of technical diagnostics, the notion of diagnosis and its reliability and accuracy, the notion of a diagnostic, diagnosed and diagnosing system, input and output signals and disturbances. The essence of technical diagnostics and its purpose and tasks. Forms of diagnostic activity: diagnosing, forecasting and genesis. Machine and energy system as an object of diagnosis. Diagnostic models of machines and energy systems: purposes of creating models, types of diagnostic models, principles of creating diagnostic models, practical usefulness of diagnostic models. Diagnostic methods and types of diagnostic inference about the technical condition of machines and energy systems. Diagnostic systems for the selected machines (high power engines) and energy devices and their reliability.</p> <p>Laboratory: Identification of the technical condition of the piston-cylinder and injection system of a compression-ignition engine by indicating its cylinders. Identification of the technical condition of a simple drive system using the vibration method and acoustic emission. Diagnostic examination of elements of the engine injection equipment on a test stand. Diagnostic examination of the valve timing unit of the Diesel engine on a laboratory test bed. Identification of the operational suitability of the lubricating oil by testing its viscosity. Diagnostic examination of the Diesel engine by means of the thermal imaging method (infrared camera). Determination of the chemical composition of engine exhaust gases.</p>											
Prerequisites and co-requisites	Knowledge of the subject internal combustion engines. Knowledge of the basics of the operation of energy machines and devices.											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr> </thead> <tbody> <tr> <td>Reports from the performed laboratory</td><td>100.0%</td><td>25.0%</td></tr> <tr> <td>test</td><td>51.0%</td><td>75.0%</td></tr> </tbody> </table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Reports from the performed laboratory	100.0%	25.0%	test	51.0%	75.0%		
Subject passing criteria	Passing threshold	Percentage of the final grade										
Reports from the performed laboratory	100.0%	25.0%										
test	51.0%	75.0%
