

GDAŃSK UNIVERSITY

Subject card

Subject name and code	Water and Wind power stations (WOiO), PG_00042089							
Field of study	Power Engineering, Power Engineering							
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024			
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			English		
Semester of study	6		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Joanna Grzelak					
	Teachers		dr inż. Joanna Grzelak					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0		15.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		5.0		65.0		100
Subject objectives	 Familiarization with flow models, in particular incompressible, viscous flows in one-dimensional terms. Formation of a boundary layer and generation of energy losses. Familiarization with the construction of large onshore and offshore wind turbines. Micro wind energy, construction of different types of windmills and their characteristics, innovative solutions Construction of traditional water turbines Construction and operation of innovative wave energy harvesting systems. 							

Learning outcomes	Course outcome	Subject outcome	Method of verification			
	[K6_K04] is able to formulate opinions on technical and technological processes in energy and sanitary engineering					
	[K6_W13] has basic knowledge of the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, internal combustion engines, compressors and rotating machines, has basic knowledge of the regulation of energy equipment and methods of their selection depending on the needs					
	[K6_W12] has basic knowledge of the life cycle and repairs of energy equipment in the field of thermal power stations, thermal and energy systems and heating systems, internal combustion engines and compressors as well as rotating machines					
	[K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources					
Subject contents	Characteristics of fluid - water, air; a equations of behavior and their appli special flow phenomena. Boundary l rotors. Hydropower generation. Hydr	ssumptions and consequences of a c ication to the stationary and incompre ayer. Wind energy. Horizontal axis w ro turbines.	continuous medium. Basic essible description. Real flow, rindmills. Darrieus rotors.vSavonius			
Prerequisites and co-requisites	Basic Fluid Mechanics Course					
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade			
	seminar - evaluation from the	51.0%	50.0%			
	lecture - assessment test	51.0%	50.0%			
Recommended reading	Basic literature	Puzyrewski, R., Fluid mechanics, Scientific Publishing House PWN, 1987;

	Supplementary literature	 Łaski, A., Water power plants. Ed. Science and Technology, Warsaw, 1975; Hydropower. Introduction to Hydro Energy Systems, Kötter Manuela, Mathur Jyotirmay, ISBN 978-3-642-20709-9 Wind Turbines, Erich Hau, ISBN 978-3-540-29284-5; Rduch, J., Turbine selection for small water power plant, IX Forum of Renewable Energy Sources, Zakopane, 2003. 			
	eResources addresses	Adresy na platformie eNauczanie: Water and Wind Power Stations, PG_00042089, W/S, Energy Technologies, sem. 6, letni, 2023/2024 - Moodle ID: 36376 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=36376			
Example issues/ example questions/ tasks being completed	Describe the components of Bernoulli's equation State the components of the disposable height.				
3 • • • 3 • • •					
	State the characteristic features of a Savonius rotor.				
	Describe the construction and operation of a Francis turbine.				
	hich water turbine is appropriate for very high gradients?				
Work placement	Not applicable
