

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Virtual design of medical devices, PG_00057880								
Field of study	Mechanical and Medical Engineering								
Date of commencement of studies	February 2023		Academic year of realisation of subject			2023/2024			
Education level	second-cycle studies		Subject group						
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	2		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Institute of Mechanics	Design -> Facı	ulty of Mechani	cal Eng	ineering and Ship Technology				
Name and surname	Subject supervisor		dr hab. inż. Artur Olszewski						
of lecturer (lecturers)	Teachers		dr hab. inż. Artur Olszewski						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	0.0	0.0	0.0	30.0		0.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation i consultation h	n Iours	Self-study		SUM	
	Number of study hours	30		0.0).0			30	
	on the phenomena that are usually ignored in engineering models (e.g. contact phenomena, deformation of elements, stresses above the yield point of the material, etc.). By comparing the obtained results of advanced numerical analyzes with the results of calculations using engineering models, students have the opportunity to draw conclusions about the correctness of the assumptions made for the formulation of engineering models and their impact on the obtained results.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_U04] He/she can use programming-communicative techniques concerning to the scope of engineering tasks					[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task			
	[K7_K03] He/she can analyze and realize given tasks proposing entrepreneur and creative activities					[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills			
	[K7_U08] He/she can formulate and verify hypotheses for simple engineering problems and research					[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools			
Subject contents	Students acquire the skill of a detailed analysis of technical structures with particular emphasis on phenomena that are usually ignored in engineering models (e.g. contact phenomena, deformation of elements, stresses above the yield point of the material, etc.). By comparing the obtained results of advanced numerical analyzes with the results of calculations using engineering models, students have the opportunity to: t draw conclusions about the correctness of the assumptions made for the formulation of engineering models and their impact on the obtained results. In principle, the subject is carried out entirely in the form of self-solving problems / issues by students, because they have relevant knowledge from the earlier stages of studies (as to the knowledge of relevant engineering models and the basics of numerical methods used). As part of the proposed course, students solve problem (design) tasks allowing to enrich the previously acquired knowledge about the functioning of machinery and equipment nodes.								
Prerequisites and co-requisites	Knowledge of 3D CAD programs (Inventor indicated). Fundamentals of machine construction.								
Assessment methods	Subject passing criteria		Passing threshold			Percentage of the final grade			
and criteria			0.0%		0.0%				
	Final project evaluati	on	56.0%			100.0%)		

Recommended reading	Basic literature	
	Supplementary literature	
	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed		
Work placement	Not applicable
