

Subject card

Subject name and code	Fundamentals of Finite Element Method (CAE), PG_00055402						
Field of study	Mechanical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Wiktoria Wojnicz					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	4.0		36.0	100	
Subject objectives	The aim of the study is to acquire knowledge of fundamentals of finite element method						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W11] possesses knowledge on design, technology and manufacturing of machine parts, metrology, and quality control; knows and understands methods of measuring and calculating values describing the operation of mechanical systems, knows calculating methods applied to analyse the results of experiments	The student is able to build appropriate analysis models layout including nonlinearities encountered in mechanics.			[SW1] Assessment of factual knowledge		
	[K6_W08] possesses knowledge including the methodology of designing machine parts, mechanical devices, selection of construction materials, manufacturing and operation, with the lifetime cycle	The student is able to assess the usefulness various MES environments to specific solving problems.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation		
	[K6_U07] is able to design a typical construction of a mechanical device, component or a testing station using appropriate methods and tools, adhering to the set usage criteria	The student is able to apply the right tools numeric required for the analyzed solution works.			[SU4] Assessment of ability to use methods and tools		
[K6_U11] is able to analyse the operation of devices and compare the construction solutions applying usage, safety, environmental, economic and legal criteria	The student understands the basics mathematical FEM.			[SU1] Assessment of task fulfilment			

Subject contents	<p>Basic information on modeling methods, structure discretization. The concept of shape function and methods of creating shape functions using different type of polynomials like: algebraic, Lagrange, Hermit, trigonometric polynomials and natural coordinates. The concept of characteristic matrices of a finite element and the method of their construction for the problems of elastic fields and heat transfer. Matrix aggregation and creation of global matrices of the finite element model. Equations of motion in FEM and methods of solving them for linear and nonlinear problems. FEM spectral formulation in the time domain. MES software.</p> <p>Design task 1 - development in Matlab FEM program for statics and dynamics analysis of isotropic beams and frames with any load patterns and boundary conditions.</p> <p>Design task 2 - development in Matlab FEM program for statics and dynamics analysis of isotropic / composite plates of any shape, boundary conditions and loads</p>											
Prerequisites and co-requisites	Algebra, Strength of Materials, Dynamics, Heat transfer											
Assessment methods and criteria	<table border="1" data-bbox="448 546 1497 651"> <thead> <tr> <th data-bbox="448 546 794 577">Subject passing criteria</th> <th data-bbox="794 546 1141 577">Passing threshold</th> <th data-bbox="1141 546 1497 577">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 577 794 609">FEM code in Matlab</td> <td data-bbox="794 577 1141 609">60.0%</td> <td data-bbox="1141 577 1497 609">50.0%</td> </tr> <tr> <td data-bbox="448 609 794 651">Test of theoretical knowledge</td> <td data-bbox="794 609 1141 651">60.0%</td> <td data-bbox="1141 609 1497 651">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	FEM code in Matlab	60.0%	50.0%	Test of theoretical knowledge	60.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
FEM code in Matlab	60.0%	50.0%										
Test of theoretical knowledge	60.0%	50.0%
