

Subject card

Subject name and code	Technical Mechanics 2, PG_00056246						
Field of study	Design and Construction of Yachts						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		6.0		
Learning profile	practical profile		Assessment form		exam		
Conducting unit	Zakład Mechaniki Konstrukcji Oceanotechnicznych -> Institute of Ocean Engineering and Ship Technology - > Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Tomasz Mikulski				
	Teachers		mgr inż. Leszek Samson				
			dr hab. inż. Tomasz Mikulski				
			dr hab. inż. Beata Zima				
			dr inż. Jakub Kowalski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	15.0	0.0	0.0	75
	E-learning hours included: 0.0						
	Additional information: Lectures, exercises and laboratories are conducted in the system of full-time education.						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		15.0		60.0	150
Subject objectives	<p>The aim of the course is to provide theoretical foundations of mechanics and strength regimes of one-dimensional structures (rods, beams). Student after the course should be able to:</p> <p>- determine the distributions of internal forces and moments</p> <p>- determine the stress distribution,</p> <p>- calculate the displacements of one-dimensional structures,</p> <p>- indicate the place of the greatest material effort at typical structure loads,</p> <p>- calculate the effort of material using a variety of strength material hypothesis.</p>						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W02		The student has acquired the ability to solve technical problems based on the laws of mechanics and basic material strength analysis.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	K6_U02		The student is able to perform strength analyzes of elements of structural systems and ship or yacht devices.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		

Subject contents	<div>1. Basics assumptions and description of the Strength of Materials problems.</div> <div>2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law.</div> <div>3. Axial tension and compression of the rod.</div> <div>4. The internal forces. Statically determinate structures: beams , trusses and frames,frame-truss systems. Cross-sectional axial forces, shear forces, bending moments, torsional moments.</div> <div>5. Moments of inertia of plane figures.</div> <div>6. Bending of beams.</div> <div>7. Torsion of monolithic and thin-walled bars.</div> <div>8. Eccentric tension (compression) of the bar.</div> <div>9. Shear stresses in bending problems.</div> <div>10. Bending line of beam. Euler's equation.</div> <div>11. Buckling of axially compressed rods.</div> <div>12. Strength hypothesises. Complex stress problems.</div> <div>13. Tendons - ropes.</div>		
Prerequisites and co-requisites	The student has passed the following subjects: - Technique Mechanic I		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exercise	50.0%	50.0%
	laboratory	50.0%	20.0%
	exam	50.0%	30.0%
