

Subject card

Subject name and code	Fundamentals of Automatics, PG_00042102							
Field of study	Power Engineering, Power Engineering							
Date of commencement of studies			Academic year of realisation of subject			2025/2026		
Education level			Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			English		
Semester of study	5		ECTS credits			6.0		
Learning profile	general academic profile		Assessment form			exam		
Conducting unit	Department of Contro	and Power E	ngineering -> I	aculty of Ocea	an Engir	neering	and Ship Tech	nology
Name and surname	Subject supervisor							
of lecturer (lecturers)	Teachers							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	30.0	0.0		0.0	75
	E-learning hours inclu	ided: 0.0						
Learning activity and number of study hours	Learning activity	Participation in classes includ plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	75		10.0		65.0		150
Subject objectives	Gaining the knowledge about fundamental concepts of control systems and robotics including system modeling and representation, analysis and synthesis, as well as technical solutions. Ability of implementation and application of control systems in industrial and engineering processes and systems.							
Learning outcomes	Course outcome [K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources		principles of analysis, synthesis, operation and evaluation of simple technical automation systems,			Method of verification		
						[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K6_W03] knows the basics of automation and automatic regulation, knows the principles of the selection of electrical devices, drive systems and their control		systems and automatic regulation, including the necessary rules for			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
Subject contents	1. Introduction and principal definitions 2. Classification of control systems 3. Modelling of dynamic systems and description of elements of control systems 4. Mathematical model presentation: differential equation, transfer function, block diagram, state and observation equations; model transformation 5. Transient function and time characteristics 6. Feedback control 7. Analisis of control systems in time and frequency domains 8. Stability 9. Controllers and principles of their selection and design 10. Quality of control systems 11. Discrete control systems							
Prerequisites and co-requisites	Preceding subjects: 1. Mathematics 2. Physics 3. Technical mechanics

17. Representation of the most important dynamic systems in the form of transfer function 18. Response trajectory 19. Solving the state and observation equations 20. Transition matrix 21. natural frequency and resonanse in control systems 22. Definition: rise time settling time overshoot oscillation degree.	
19. Solving the state and observation equations 20. Transition matrix 21. natural frequency and resonanse in control systems 22. Definition: rise time settling time overshoot	
20. Transition matrix 21. natural frequency and resonanse in control systems 22. Definition: rise time settling time overshoot	
21. natural frequency and resonanse in control systems 22. Definition: rise time settling time overshoot	
22. Definition: rise time settling time overshoot	
rise time settling time overshoot	
settling time overshoot	
overshoot	
oscillation degree.	
23. Frequency domain characteristics	
24. Relation between time and frequency domain characteristics	
25. Nyquist and Bode characteristics	
26. Bandwidth and filters	
27. Resonance compensation	
28.Damping coefficient and its influence	
29. Structure of controllers, their block diagrams	
30. The elements of controllers	
31. General principles for selecting a controller	
32. Ideal linear controllers, types, transfer functions	
33.Design of structure of controllers	
34. Controller characteristics and its influence of the behaviour of control system	
35. Design of characteristics of controllers using parallel connection of elements	
36. Hydraulic amplifier	
37. Stability of control systems, definition based on Lyapunov, examples.	

Data wydruku: 19.05.2024 14:56 Strona 4 z 5

	38. Stability of control systems
	39. How stability is affected by the conditions
	40. Characteristic equation of a control system
	41.Stability checking based on the roots of characteristic equation
	42. The reason for which we use stability criteria
	43. Routh-Hurwitz stability criterion
	44. Nyquista stability criterion
	45. Stability margins
	46.Steady-state error, way of calculation
	47. Relation between the controller parameters and steady state error
	48. Optimization of control system
	49. Quality of control system
	50 General information about discrete control systems
Work placement	Not applicable
