

## Subject card

Subject name and code	Technical Thermodynamics 1, PG_00042038							
Field of study	Power Engineering, Power Engineering							
Date of commencement of studies	October 2023		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction		English			
Semester of study	3		ECTS credits		6.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Energy and Industrial Apparatus -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname	Subject supervisor							
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	Project Seminar		SUM
	Number of study hours	30.0	15.0	15.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		10.0		80.0		150
Subject objectives	Presentation of fundamental mechanisms and laws governing the thermodynamics. Familiarisation with approaches to the analysis of processes. Analysis of examples of thermodynamic cycles and their description. Introduction to the analysis of exergy							

Data wydruku: 19.05.2024 18:43 Strona 1 z 3

RKC_UOS   is able to formulate and carry out energy balances in devices and energy systems, also simple building object, is able to perform a preliminary profitability analysis of a planned energy investment!   RKC_WIS   knows and suderstands methods for thermodynamics, fluid mechanics and typicalics, hydrology, knows the calculation methods and IT look necessary to and field work.   RKC_UOS   is able to seriessary to and feel work.   RKC_WIS   knows and suderstands energy equipment in the field of energy equipment in the field of thermal power plants, thermal and combustions enginess. Compressors and rotaling machines to assess the technical condition of the system.   RKC_WIS   is able to the basic knowledge of the energy equipment in the field of thermal power plants, thermal and combustions engines. Compressors and rotaling machines to assess the technical condition of the system.   RKC_WIS   is able knowledge of the energy equipment in the field of thermal power plants, thermal and combustions engines. Compressors and rotaling machines to assess the technical variety expensions and systems, energy plants and transmission networks and their energy plants and transmission networks and their energy plants and transmission networks and their applications.	Learning outcomes Course outcome		Subject outcome	Method of verification				
The basic quantities characteristic methods for thermodynamics, fluid mechanics and hydraulics, fluid mechanics and hydraulics, fluid mechanics and hydraulics, fluid mechanics and hydraulics. The modynamic part of analyse the results of laboratory and field work.    IKE LOGI] is able to use the basic knowledge of knowledge or the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, combuston engines, compressors the technical condition of the system.    IKE WOZ] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical enteriors and describe the basic knowledge of thermodynamics in the dimension of theory and practice. Suderi respirate thermodynamics, fluid mechanics thermodynamics and transmission networks and their environment.    LECTURE: Basic concepts. The first law of thermodynamics, ideal gas model. Properties of ideal, semi-ideal applications.    Subject contents   LECTURE: Basic concepts. The first law of thermodynamics, ideal gas madel. Properties of ideal, semi-ideal applications.    Subject contents   LECTURE: Basic concepts. The first law of thermodynamics and its consequences. Isobaric evaporation process. Properties of steam. Properties of superheated steam. Characteristic processes of disea and calculations of state of ideal gas. Gas anxiety and transmission and its consequences. Isobaric evaporation process. Properties of steam. Properties of superheated steam. Characteristic processes of diseam. Properties of superheated steam. Characteristic processes of diseas. Properties of superheated steam. Characteristic processes of diseas. Properties of steam. Characteristic changes of steam. Characteristic changes of steam. Characteristic processes of		carry out energy balances in devices and energy systems, also perform an energy audit of a simple building object, is able to perform a preliminary profitability analysis of a planned energy						
International Contents   International Conte		the basic quantities characteristic methods for thermodynamics, fluid mechanics and hydraulics, hydrology; knows the calculation methods and IT tools necessary to analyse the results of laboratory						
of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment  Subject contents  LECTURE: Basic concepts. The first law of thermodynamics, ledal gas model. Properties of ideal, semi-ideal and real gases. Gas laws, thermal and caloric equation of state. Characteristic processes of ideal gas. Gas mixtures. Thermodynamic gas cycles. The second law of thermodynamics and its consequences. Isobaric evaporation process. Properties of steam. Properties of superheated steam. Characteristic processes of steam. Thermodynamic systems. State and functions of state of ideal and semi-ideal gases and gas mixtures. Characteristic processes of gases. Gas thermodynamic cycles. Characteristic changes of steam. Calculations thermodynamic systems. State and functions of state of ideal and semi-ideal gases and gas mixtures. Characteristic processes of gases. Gas thermodynamic cycles. Characteristic changes of steam. Calculations thermodynamic steam cycles.  LABORATORIES: Measurements of thermodynamic parameters: temperature and pressure. Determination of mass flow rate. Determination of air and water enthalpy. Energy balance of piston engine and heat pump.  Prerequisites  thermodynamics, fluid mechanics, mathematics, physics  Subject passing criteria  Passing threshold  Percentage of the final grade  1. M.J. Moran, H.N. Shapiro, D.D. Boettner, M.B. Bailey, Fundamentals of Engineering Thermodynamics 8th Ed., Wiley, 2014  2. Y. Cengel, M. Boles, Thermodynamics An Engineering Approach, 8th Edition, Wiley, 2014  Supplementary literature  Any textbook on engineering thermodynamics		knowledge on the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, combustion engines, compressors and rotating machines to assess the technical condition of the						
and real gases. Gas laws, thermal and caloric equation of state. Characteristic processes of ideal gas. Gas mixtures. Thermodynamic gas cycles. The second law of thermodynamics and its consequences. Isobaric evaporation process. Properties of steam. Properties of superheated steam. Characteristic processes of steam. Thermodynamic steam cycles.  EXERCISES: Simple conversion of energy, heat, work. The balances of power of open or closed thermodynamics systems. State and functions of state of ideal and semi-ideal gases and gas mixtures. Characteristic processes of gases. Gas thermodynamic cycles. Characteristic changes of steam. Calculations thermodynamic steam cycles.  LABORATORIES: Measurements of thermodynamic parameters: temperature and pressure. Determination of mass flow rate. Determination of air and water enthalpy. Energy balance of piston engine and heat pump.  Prerequisites and co-requisites  Assessment methods and criteria  Subject passing criteria  Passing threshold Percentage of the final grade Tutorial test futorial test folon% 50.0%  Recommended reading  Basic literature  1. Example issues/	Definition of work and heat; units of heat and rate of heat, work and power; graphical interpretation of			
example questions/	work (absolute and technical).			
tasks being completed	What is the closed and open system (name differences, schematic of the systems)			
tasks being completed	3. What is a thermodynamic cycle?.Draw a sample cycle in p-v and T-s coordinates.			
	Definition of extensive and intensive properties (examples)			
	5. Pressure (definition, units, atmospheric pressure, absolute pressure, gauge pressure, vacuum			
	pressure), pressure measurement by U-tube manometer			
	6. Zeroeth Law of Thermodynamics			
	7. Definition of quality, Schematic p-v, T-s diagram for wet steam, mark one example of quality line.			
	Describe the procedure for evaluation of a state property in the wet vapour region.			
	Describe the process of isobaric heating of water from liquid state to superheated vapour.			
	10. Ideal gas equation, specific heat at constant pressure and constant volume, exponent of adiabate.			
	Assumptions for the ideal gas.			
	11. Van der Waals equation of state. Properties of real gas.			
	12. Describe the isovolumetric, isobaric, isothermal, isenthalpic and adiabatic process. Derive expressions			
	describing the heat, work and technical work for the process. Present processes in p-v and T-s			
	diagrams.			
	13. First Law of Thermodynamics for closed and open systems in the differential form, rate form and			
	integrated forms. Explain the terms.			
	14. Second Law of Thermodynamics. Give two verbal definitions of the cycle.			
	15. Reversible and irreversible processes.			
	16. Present the way of calculation of entropy change for ideal gas.			
	17. Exergy definition. Explain the difference between energy and exergy.			
	18. Definition of efficiency of heat engines.			
	19. Incorporation of First Law of Thermodynamics into the Second Law of Thermodynamics. Derive the			
	relation for the individual gas constant expressed in term of specific heat at constant pressure and			
	constant volume.			
	20. Application of 1st Law of Thermodynamics for open systems to compressor, heat exchanger, turbine.			
	21. The Carnot cycle (2 isotherms, 2 isentropes). Draw the cycle in p-v and T-s diagrams. Define efficiency			
	of the cycle for its operation as engine cycle.			
	22. The Clausius Rankine cycle discuss the constituent elements of the cycle, draw the processes in T-s, p-			
	v and h-s diagram, write the expression for the efficiency of the cycle, name three ways of increasing			
	the cycle efficiency.			
	23. Criteria for selection of working fluids for the organic Rankine cycle. Explain the difference between wet,			
	dry and isentropic fluid.			
	24. The Brayton turbine cycle (2 isentropes, 2 isobars). Draw the cycle in p-v and T-s diagrams. Define			
	efficiency of the cycle. What is understood by the cycle regeneration?			
	25. The heat pump Linde cycle draw the cycle and processes in T-s, p-h diagram, define the coefficient of			
	performance of the cycle. Name two ways of increasing COP.			
	26. The refrigeration Linde cycle draw the cycle and processes in T-s, p-h diagram, define the coefficient of			
	performance of the cycle. Name two ways of increasing COP.			
	27. Principle of operation of absorption refrigeration cycle.			
	28. Criteria for selection of the working fluid for the refrigeration/heat pump cycle.			
Work placement	Not applicable			
Work placement
