

Subject card

Subject name and code	Mathematics 2, PG_00042017						
Field of study	Power Engineering, Power Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	2	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Hanna Guze				
	Teachers		dr Hanna Guze				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	45.0	0.0	0.0	0.0	90
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		15.0		45.0	150
Subject objectives	Students obtain competence in using methods of mathematical analysis and differential equations, and knowledge how to solve simple problems that are found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_K01] is aware of the need for training and self-improvement in the profession of energy and the possibility of further education; can think and act in a creative and entrepreneurial manner; can define priorities for the implementation of an individual or group task		Student understands that to use a specific math tool, he needs to reach for additional knowledge in given subject. Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem.			[SK2] Assessment of progress of work	
	[K6_U02] is able to apply the learned mathematical methods to the analysis and design of elements, systems and energy systems		Student combines knowledge of mathematics with knowledge from other fields.			[SU3] Assessment of ability to use knowledge gained from the subject	
	[K6_W01] has basic knowledge of mathematics necessary to describe the phenomena related to the processes of energy conversion and transfer; uses information technology to solve mathematical problems		Student analyses properties of a given function of two variables using differential calculus of multivariable functions. Student evaluates the limits of sequences, radius and interval of convergence of a power series. Student is able to determine the type of convergence of a number series. Student evaluates double and triple integrals and explains the methods of change of variables. Student knows various types of differential equations and selects the appropriate methods to solve them. Students explains the definition of the cross product. Student evaluates line integrals.			[SW1] Assessment of factual knowledge	

Subject contents	<p>Indefinite integral.</p> <p>Definite and improper integral and their applications.</p> <p>Complex numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, root of complex numbers, solving equations.</p> <p>Infinite number series: necessary condition for convergence, criteria for convergence, alternating series, conditional and absolute convergence.</p> <p>Power series.</p> <p>Analytic Geometry: vectors (dot product, cross product, mixed product, and their application), equations of line and planes in space.</p> <p>Conic sections and graphs of selected surfaces.</p> <p>Multivariable Functions: limits and continuity, partial derivatives with applications.</p> <p>Integrals of multivariable functions: double integrals (definition, polar coordinates, application in geometry and physics), triple integrals (definition, cylindrical and spherical coordinates, application in geometry and physics).</p> <p>Ordinary Differential Equations: separable, homogeneous, Bernoulli, first order linear equations, linear of order n with constant coefficients, variation of parameters and undetermined coefficients method.</p> <p>Line integral of a scalar field and a vector field.</p>											
Prerequisites and co-requisites	Working knowledge of the concepts of the first semester of mathematics.											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="454 1227 794 1256">Subject passing criteria</th> <th data-bbox="799 1227 1139 1256">Passing threshold</th> <th data-bbox="1144 1227 1473 1256">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="454 1263 794 1292">Final Exam</td> <td data-bbox="799 1263 1139 1292">40.0%</td> <td data-bbox="1144 1263 1473 1292">50.0%</td> </tr> <tr> <td data-bbox="454 1299 794 1328">Tests and activity in classes</td> <td data-bbox="799 1299 1139 1328">0.0%</td> <td data-bbox="1144 1299 1473 1328">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Final Exam	40.0%	50.0%	Tests and activity in classes	0.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Final Exam	40.0%	50.0%										
Tests and activity in classes	0.0%	50.0%
