

Subject card

Subject name and code	Mathematics 2, PG_00042017						
Field of study	Power Engineering, Power Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject				2023/2024	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				English	
Semester of study	2	ECTS credits				6.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Hanna Guze					
	Teachers	dr Hanna Guze					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	45.0	0.0	0.0	0.0	90
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	90	15.0		45.0	150	
Subject objectives	Students obtain competence in using methods of mathematical analysis and differential equations, and knowledge how to solve simple problems that are found in the field of engineering.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_K01] is aware of the need for training and self-improvement in the profession of energy and the possibility of further education; can think and act in a creative and entrepreneurial manner; can define priorities for the implementation of an individual or group task	Student understands that to use a specific math tool, he needs to reach for additional knowledge in given subject. Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem.			[SK2] Assessment of progress of work		
	[K6_U02] is able to apply the learned mathematical methods to the analysis and design of elements, systems and energy systems	Student combines knowledge of mathematics with knowledge from other fields.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W01] has basic knowledge of mathematics necessary to describe the phenomena related to the processes of energy conversion and transfer; uses information technology to solve mathematical problems	Student analyses properties of a given function of two variables using differential calculus of multivariable functions. Student evaluates the limits of sequences, radius and interval of convergence of a power series. Student is able to determine the type of convergence of a number series. Student evaluates double and triple integrals and explains the methods of change of variables. Student knows various types of differential equations and selects the appropriate methods to solve them. Students explains the definition of the cross product. Student evaluates line integrals.			[SW1] Assessment of factual knowledge		

Subject contents	<p>Indefinite integral.</p> <p>Definite and improper integral and their applications.</p> <p>Complex numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, root of complex numbers, solving equations.</p> <p>Infinite number series: necessary condition for convergence, criteria for convergence, alternating series, conditional and absolute convergence.</p> <p>Power series.</p> <p>Analytic Geometry: vectors (dot product, cross product, mixed product, and their application), equations of line and planes in space.</p> <p>Conic sections and graphs of selected surfaces.</p> <p>Multivariable Functions: limits and continuity, partial derivatives with applications.</p> <p>Integrals of multivariable functions: double integrals (definition, polar coordinates, application in geometry and physics), triple integrals (definition, cylindrical and spherical coordinates, application in geometry and physics).</p> <p>Ordinary Differential Equations: separable, homogeneous, Bernoulli, first order linear equations, linear of order <math>n</math> with constant coefficients, variation of parameters and undetermined coefficients method.</p> <p>Line integral of a scalar field and a vector field.</p>											
Prerequisites and co-requisites	Working knowledge of the concepts of the first semester of mathematics.											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="454 1229 794 1256">Subject passing criteria</th> <th data-bbox="794 1229 1141 1256">Passing threshold</th> <th data-bbox="1141 1229 1473 1256">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="454 1261 794 1288">Final Exam</td> <td data-bbox="794 1261 1141 1288">40.0%</td> <td data-bbox="1141 1261 1473 1288">50.0%</td> </tr> <tr> <td data-bbox="454 1292 794 1319">Tests and activity in classes</td> <td data-bbox="794 1292 1141 1319">0.0%</td> <td data-bbox="1141 1292 1473 1319">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Final Exam	40.0%	50.0%	Tests and activity in classes	0.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Final Exam	40.0%	50.0%										
Tests and activity in classes	0.0%	50.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> <li>1. Find the general solution of the differential equation.</li> <li>2. Determine convergence of the series.</li> <li>3. Find local extreme values of the function <math>f(x,y)=\dots</math></li> <li>4. Find the volume of the given solid by means of double or triple integral.</li> <li>5. Find the roots of the given complex number.</li> <li>6. Sketch the graph of the following surface.</li> </ol>
