

SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

Subject card

Subject name and code	Mathematics I, PG_00055733								
Field of study	Mechanical and Medical Engineering								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			10.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Mathematics Center -> Vice-Rector for Education								
Name and surname of lecturer (lecturers)	Subject supervisor dr Anna Niewulis								
	Teachers		dr Anna Niewulis						
		mgr inż. Renata Zakrzewska							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	45.0	60.0	0.0	0.0		0.0	105	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	105		24.0		121.0		250	
Subject objectives	The aim of this subject is to obtain the student's competence in the range of using the basic methods of mathematical analysis. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_U05] he/she is able to use analytic and modelling methods to formulate and solve engineering tasks related to the mechanical- medical area		The student is able to apply the mathematical methods for analysis to solve problems in the field of mechanical and medical engineering.			[SU2] Assessment of ability to analyse information			
	[K6_U01] he/she is able to acquire knowledge and self-studying, he/ she is able to find needed information in specialist books, databases and other sources, he/ she is able to integrate information and draw conclusions, he/she is able to communicate by using different technics in work and outside		Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem. Student combines knowledge of mathematics with knowledge from other fields.			[SU1] Assessment of task fulfilment			
	mathematics skills related to linear algebra and applied mathematics to model a given mechanical system, manufacturing process or technical device		basic properties of derivatives. Student analyzes the properties of functions with the use of its first and second derivatives. Student applies basic formulas and techniques of integration to calculate indefinite integrals.			Knowledge			

Subject contents	 Functions of one variable: definitions, graphs, properties, continuity, limits, absolute value, equations and inequalities, polynomials, rational functions, power functions, trigonometric and inverse trigonometric functions, exponential and logarithmic functions, equations and inequalities involving these functions, applications to mathematical modeling. Infinite number sequences, fundamental definitions of a limit of a sequence, convergence and divergence, limit theorems. Single variable calculus: definition of the derivative, Rolle's and Lagrange's theorems and their applications, L'Hospital's Rule, higher order derivatives, monotonicity and local/global extrema, concavity, inflection points, applications of single variable differential calculus to curve sketching, related rates and approximation problems, applications of differential calculus to other fields. Fundamental Theorem of Calculus: definite and indefinite integral, basic integration formulas, integration by substitution, by parts, by partial fractions, Integration of rational functions, trigonometric and irrational, applications of integral calculus to other fields. Elements of linear algebra: matrices, determinants and their properties, systems of linear equations. 					
Prerequisites and co-requisites	No recomendations					
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria						
		50.0%	50.0%			
	lexam	50.0%	50.0%			
Recommended reading	Basic literature	terature G.M. Example issues/ example questions/ tasks being completed	es/ 1. Prove that this sequence is monotonic a_n=(n^2+1)/n!. stions/ ompleted					
	2. Evaluate the limit of a given sequence $a_n = (3n^2 + 6n)^{\frac{1}{2}} - 3^{\frac{1}{2}}n$.					
	3. Find the limit of the function $f(x) = x \sin(1/x)$ in the zero point.					
	4. Evaluate the indefinite integral of the given rational function $f(x)=(x+3)(x^3+3x^2+4x+2)$.					
	5. Find local extremes and intervals of monotonicity of the following function $f(x) = (x^2 + 4x + 1)e^x$.					
Work placement	Not applicable
