|   | Teachers  |  |  |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type   | Lecture  | Tutorial   | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours   | 30.0   | 0.0  | 30.0                                | 0.0  | 0.0        | 60  |
|   | E-learning hours included: 0.0  |  |  |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity   | Participation in didactic classes included in study plan |  | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours   | 60   |  | 5.0                                 |  | 60.0       | 125 |
| Subject objectives                          | Acquainting with the construction, principle of operation and use of basic medical equipment.   |  |  |                                     |  |            |     |
| Learning outcomes                           | Course outcome  |  | Subject outcome  |                                     | Method of verification   |            |     |
|   | [K6_W13] he/she has knowledge related to application of engineering approaches in medicine or application of medical devices and rehabilitation devices   |  | He/she can describe basic types of medical equipment. Can explain physical basis of its work and can propose different alternative ways of measurements. |                                     | [SW1] Assessment of factual knowledge  |            |     |
|   | [K6_U06] he/she has skills to work in industry and follow the rules of safety regulations, he/she is able to analyze basic economics problems to delineate the direction of solution by using engineering methods |  | He/she can estimate role of medical engineering in modern medical practice.  |                                     | [SU4] Assessment of ability to use methods and tools   |            |     |
|   | [K6_U11] he/she uses basic medical apparatus and devices, he/she applies knowledge related to the visual diagnosis in the scope of the MME study  |  | He/she can apply analytical method for solving some problems found in construction of medical apparatus.   |                                     | [SU4] Assessment of ability to use methods and tools   |            |     |

| Subject contents   | <p>Measurements and parameters of signals (ECG, EEG, EMG, nystagmographic etc.). Patient isolation and protection against electrical shock. Types of isolation barriers. Modern element base applied for measurements of bioelectrical signals. Specific parameters of bioelectrical signals frequency range, amplitude, periodicity. EEG registration. Types of electrode arrangements. Deconvolution of signal patterns. Location of signal sources. Magnetocephalography basic theory. Detection of ultraweak magnetic fields. Application of optical detection in medicine: spectrophotometry, absorption measurements in UV and VIS ranges. Detector types, spectral responses, application schemes. Synchronous detection. Light sources. Basic theory of light absorption in solutions. Detection of proteins and nucleic acids presence. Mechanical solutions improving stability and repeatability of measurements. Measurements of oxygen saturation in blood. Optical method of detection. Isosbestic point. Layout of oxygen level monitor. OCT application of optical scanning for detection of retinal voids. Application of OCT for blood vessel scanning. Nonmedical applications of OCT. Therapeutic application of ultrasound. Basic structure of lithotripter. Methods of power ultrasound generation. Piezoelectric, spark and electrodynamic sources. Methods of focusing. Dialyzer basic idea. Basic blocks. Demonstration of different components with explanations. Microwave diathermy application and basic theory of physical phenomena. Structure of microwave source. Antennas. Efficiency of energy transfer. Basic facts about spectra of bioelectric signals. Sampling, resolution and detection of periodicity. Filtration LP, HP, BP, BR. Estimation methods applied for filter selection. Practical realization of different filter types. Impedance measurements applied in medicine and biology. Impedance spectroscopy. Applications in cardiology. Body composition measurements. Application of impedance spectroscopy in detection of blood vessel anomalies.</p> |                               |  |                          |  |                               |                          |   |        |                      |                                  |  |
|--|--|-------------------------------|--|--------------------------|--|-------------------------------|--------------------------|---|--------|----------------------|----------------------------------|--|
| Prerequisites and co-requisites                                | Basic knowledge about elementary mathematics, electronics, especially measurements. Basis of anatomy and physiology.   |                               |  |                          |  |                               |                          |   |        |                      |                                  |  |
