

Subject card

Subject name and code	, PG_00056101						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Beata Majkowska-Marzec				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	The aim of the course is to obtain by students basic knowledge and skills related to the technology of producing metal, ceramic, polymer and composite biomaterials, methods of producing implants for various applications, process control and research methods.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] he/she has skills in the field mechanical testing of materials used in engineering and mechanical-medical area	Student is able to characterize the main technologies of producing biomaterials and implants, justify them, provide the necessary methods of control and development research.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
	[K6_W13] he/she has knowledge related to application of engineering approaches in medicine or application of medical devices and rehabilitation devices	Student is able to characterize the basic techniques of producing biomaterials and implants, including subtractive and additive methods.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	[K6_K01] he/she knows his/her proficiencies and his/her limitations in performing professional tasks, he/she is aware of needing to improve his/her skills through the whole life, he/she has entrepreneurship and innovation skills, he/she is aware of engineering skills from the society point of view	The student is able to explore the professional literature on the technology of producing biomaterials and implants, determine the degree of innovation of the proposed methods and purposeful progress in these areas.	[SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills [SK2] Assessment of progress of work
	[K6_U07] he/she is able to identify the problem and list simple engineering tasks to solve this problem in practice, he/she is able to critically analyze the proposed technical solutions and conclude whether these solutions can be implemented to solve problems related to design of mechanical devices and mechanical-medical devices	The student knows how to assess the production technologies existing in the field of biomaterials and implants, their advantages and disadvantages, methods of control and research.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
[K6_W07] he/she is able to design, manufacture and utilize machine parts and technical devices, he/she can prepare a technical documentation	The student has the necessary knowledge about the design of technology for the production of biomaterials and implants, technological diagrams, technical documentation.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects	
Subject contents	Technologies for the production of metallic biomaterials and implants: molding, additive methods, subtraction methods, post-treatment, process control, research methods. Technologies for the production of ceramic biomaterials and implants: powder metallurgy, additive methods, chemical methods, process control, research methods. Technologies for the production of polymer biomaterials and implants: additive methods, subtractive methods, electrospinning, process control, research methods. Technologies for the production of composite biomaterials and implants: additive methods, process control, research methods.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory exercises	50.0%	50.0%
	Written examination	50.0%	50.0%
