

Subject card

| | | | | | | | | |
|---|--|--|--|--|------------|---|---------|-----|
| Subject name and code | | Electrical technology and electronics, PG_00055052 | | | | | | |
| Field of study | | Management and Production Engineering | | | | | | |
| Date of commencement of studies | | October 2023 | Academic year of realisation of subject | | | 2023/2024 | | |
| Education level | | first-cycle studies | Subject group | | | Obligatory subject group in the field of study | | |
| Mode of study | | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | | 1 | Language of instruction | | | Polish | | |
| Semester of study | | 2 | ECTS credits | | | 4.0 | | |
| Learning profile | | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | | Department of Control Systems Engineering -> Faculty of Electrical and Control Engineering | | | | | | |
| Name and surname of lecturer (lecturers) | | Subject supervisor | | dr inż. Łukasz Sienkiewicz | | | | |
| | | Teachers | | dr inż. Łukasz Sienkiewicz dr hab. inż. Jarosław Łuszcz | | | | |
| Lesson types and methods of instruction | | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | | Number of study hours | 30.0 | 0.0 | 30.0 | 0.0 | 0.0 | 60 |
| | | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | SUM | |
| | | Number of study hours | 60 | 4.0 | | 36.0 | 100 | |
| Subject objectives | | The aim is to explain the fundamental laws of the electrical phenomena and to instruct students about the basic principle of operation of electrical and electronic equipment used in production systems and processes. | | | | | | |
| Learning outcomes | | Course outcome | Subject outcome | | | Method of verification | | |
| | | [K6_U02] has the ability of self-learning and expanding knowledge in a specialized field of engineering production | Student operates basic electrical equipment used in industry. Connects simple electrical circuits. Performs basic measurements of electrical quantities. Interprets the results of the measurements. Uses a modern electric drive systems. | | | [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task | | |
| | | [K6_W04] has basic knowledge in the field of automation, robotics and control of production processes, has elementary knowledge of electrical and electronic applications in the production system, has basic knowledge of thermodynamics and fluid mechanics as well as the selection and design of hydraulic and pneumatic systems | Student defines the basic physical quantities in electric circuits. Explains the law describing the relationship between physical quantities in electric circuits. Explains the basic principles of operation of electrical machines and electrical equipment. Student explains principles of operation of basic elements and electronic systems used in industry. | | | [SW1] Assessment of factual knowledge | | |
| | | [K6_K01] feels the need for self-realization by learning throughout life, is looking for modern and innovative solutions in their actions, is able to think creatively and act in an entrepreneurial way | Student knows new technical solutions used in electric drive systems and control and supervision systems of electrical devices. Operates modern electronic and measuring equipment. Recognizes the importance of self-expanding knowledge and skills in the field of study and related areas. Combines knowledge from various fields to understand the principles of operation of modern production devices and systems. | | | [SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills | | |

| Subject contents | <p>Lecture: The basic physical quantities in electrical engineering. Electrical circuit elements and their characteristics. Kirchhoff's laws. DC and AC circuits. Three-phase AC symmetrical circuits. Electric and magnetic field, forces in the electromagnetic field. The Faraday's law of electromagnetic induction. Transformer - the physical phenomena and principles of operation. Electric DC and AC motors and generators - principles of operation, velocity control. Elements of passive electronics. Types and principle of operation of semiconductor devices. Semiconductor electronics components: diodes, transistors, thyristors. Optoelectronics. Power electronic converters in the drive system: rectifier, chopper, inverter. Operational amplifier and its applications - generators, filters, regulators. Elements of digital technology - logic gates, memory and microprocessors. Protection against electric shock. Laboratory: Linear and nonlinear DC circuits - the supply and load elements, measurements of electrical quantities, voltage-current characteristics of the elements. AC circuits - basic elements, measurements of power, current and voltage, setting the parameters. Transients in electrical circuits. The drive system of DC motor - methods of speed and torque control. The drive system with asynchron motor - start-up, speed control. Servodrive with permanent magnet synchronous motor - position, velocity and torque control. Microprocessor controllers in drive systems. Electronic measurement equipment - terms of use, protection against interference, oscilloscope recording of signals. Semiconductor diodes and their application - rectifiers. Optoelectronics and its applications - encoders, optical links. Operational amplifier and its application - basic systems based on operational amplifiers, active filters. Basic LSI logic gates of combinatoric and sequential type - principle of operation, electrical characteristics. Transducers for measurement of mechanical quantities: acceleration (accelerometer), angular velocity (gyroscopic sensor, incremental encoder), distance and displacement (laser rangefinder and displacement sensor).</p> | | | | | | | | | | | |
|--|---|--|-------------------------------|--------------------------|-------------------|-------------------------------|----------------------------------|-------|-------|---------------------------------|-------|-------|
| Prerequisites and co-requisites | Basic knowledge in mathematics and physics at secondary level. | | | | | | | | | | | |
| Assessment methods and criteria | <table border="1" data-bbox="448 647 1498 678"> <thead> <tr> <th data-bbox="448 647 794 678">Subject passing criteria</th> <th data-bbox="794 647 1141 678">Passing threshold</th> <th data-bbox="1141 647 1498 678">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 678 794 710">Tests on the content of lectures</td> <td data-bbox="794 678 1141 710">50.0%</td> <td data-bbox="1141 678 1498 710">50.0%</td> </tr> <tr> <td data-bbox="448 710 794 752">Practical exercise (laboratory)</td> <td data-bbox="794 710 1141 752">50.0%</td> <td data-bbox="1141 710 1498 752">50.0%</td> </tr> </tbody> </table> | | | Subject passing criteria | Passing threshold | Percentage of the final grade | Tests on the content of lectures | 50.0% | 50.0% | Practical exercise (laboratory) | 50.0% | 50.0% |

| Example issues/ example questions/ tasks being completed | <p>The calculation of the currents in the DC circuit. Calculation of the power of circuit components. The adjustment of the circuit parameters to achieve a specific desired value of the given output parameter of the circuit. The calculation of currents and voltages in a circuit with a transformer. Calculating the current in the symmetrical 3-phase circuit. The connecting of the simple electrical circuit and measuring of basic electrical quantities. The operating of propulsion system with an electric motor. Performing measurements and determining voltage-current or frequency characteristics in simple electronic systems.</p> | | | | | | | | | | | |
